1.0 SUMMARY

The purpose of the work for which this report is prepared is to perform a Phase I environmental site assessment of a property located in Newtown, Connecticut (the "Subject Property"). The Phase I environmental site assessment was conducted in accordance with the American Society of Testing and Materials (ASTM) "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Standard Practice Designation E 1527-05". The goal of the process established by this practice is to identify "recognized environmental conditions", if present. The term "recognized environmental conditions" under the practice is defined as follows:

"the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies"

The Town of Newtown requested the Phase I environmental site assessment because the Town of Newtown owns the Subject Property and is applying for development funding. The Subject Property is located at 28 Trades Lane in Newtown, Connecticut. The property is designated in the Newtown, Connecticut, Tax Assessor's office as 37-3-1D. The Subject Property is a portion of properties acquired by the Town of Newtown from the State of Connecticut in 2004. The acquired properties are part of the former State of Connecticut Fairfield Hills Mental Health Hospital which was closed in 1996.

The Subject Property is an approximately 185-acre property with 15 buildings, 10 homes, 5 duplexes, a water reservoir storage building, and a "chiller house" associated with air conditioning equipment. The State of Connecticut began development of the Fairfield Hills Mental Health Hospital and constructed the majority of the buildings in the early 1930's. For much of the history the facility was almost self-sufficient. The facility operated a farm, generated its own electricity and steam for building heat, and treating its own wastewater.

The State of Connecticut closed the facility in 1996 and offered the Subject Property for sale. The Town of Newtown purchased the property in 2004 and began redevelopment of the property. The Fairfield Hills Town of Newtown Master Plan for the Subject Property calls for reserving a major portion of the 185-acre property for municipal and cultural use, as well as passive and active recreational use. A select number of existing buildings and land parcels have been designated for commercial purposes.

The Subject Property is located in a rural area in the Town of Newtown. The area is characterized by open spaces owned by the State of Connecticut, and areas of special use such as a Town of Newtown school, a boarding and training area used by the Governor's Horse Guard, a facility used to train police dogs, Town of Newtown maintenance facilities and the Gardner Correctional institute. There is limited residential use to the west and to the south and an elderly housing complex to the south. Deep Brook is located to the west and north and the Pootatuck River to the east.

The Subject Property is located on a plateau-type area that has a shallow bowl-type topography with a low point to the north.

The Subject Property has a campus-like setting. The main portion of the property containing the buildings is landscaped with grass and numerous trees. All of the utilities are underground in utility tunnels or otherwise buried. The undeveloped portions of the property are woods or hay fields. The buildings were heated with steam generated off site at the power plant and piped underground to the buildings. The former power plant is located to the north of the Subject Property. Sewage was collected and piped to offsite treatment plants, first to the Fairfield Hills dedicated treatment plant then to the Town of Newtown treatment plant. All of the Fairfield Hills maintenance buildings were located off of the Subject Property to the north.

To the north of the Subject Property is a road, Wasserman Way; other former Fairfield Hills Mental Health Hospital properties also owned by the town; and property owned by the State of Connecticut. To the east of the Subject Property is former Fairfield Hills Metal Health Hospital property still owned by the State of Connecticut and the state-owned Gardner Correctional Institute. To the south of the Subject Property are undeveloped properties and residential properties. To the west of the Subject Property are residential properties, a railroad track, and Deep Brook.

At the time of the transfer of ownership (transfer of the Subject Property from the State of Connecticut to the Town of Newtown) the Subject Property was considered an "establishment" under the State of Connecticut Property Transfer Act. Under the Act, the Town of Newtown accepted responsibility for remediation of the known environmental concerns of the Subject Property in accordance with the State of Connecticut Remediation Standard Regulations. The State of Connecticut retained responsibility for remediation of unknown environmental concerns and for remediation of dieldrin-impacted Subject Property storm water discharge to Deep Brook.

In accordance with the Connecticut Property Transfer Act, The State of Connecticut Remediation Standard Regulations, and the State of Connecticut Department of Environmental Protection (CT DEP) approved Subject Property Remedial Action Plan, the Town of Newtown has completed the remediation of contaminated soil at the property by removal of the contaminated soil. Some limited contaminated groundwater remains the concentrations of which should naturally reduce to applicable Remediation Standard Regulations criteria now that the sources of groundwater contamination, the contaminated soil, were removed. Until the groundwater monitoring in accordance with the State of Connecticut RSRs documents that the groundwater contamination has been reduced to the RSRs criteria, this groundwater

contamination is considered ASTM recognized environmental conditions. None of this existing groundwater contamination is moving offsite or impacting any drinking water. As such, the following ASTM "recognized environmental conditions" were discovered at the Subject Property through the Phase I environmental assessment process.

- 1. The presence of petroleum impacted groundwater at the northeast side of the Yale building.
- 2. The presence of petroleum impacted groundwater at the northeast side of the Canaan building.
- 3. The presence of the dry cleaning solvent teterachloroethylene impacted groundwater at the northeast side of the former Laundry building.
- 4. The presence of the pesticide dieldrin impacted groundwater at the center developed portion of the Subject Property.
- 5. The presence of flaking lead-based paint on the exteriors of the buildings that may recontaminate soils with lead around the buildings.

This environmental assessment did not perform radon, lead-based paint, or asbestos surveys or any other work not expressly described in the scope of work for this project and this Phase I environmental assessment report.

2.0 INTRODUCTION

2.1 Project Purpose

The purpose of the work for which this report is prepared is to perform a Phase I environmental site assessment of a property located in Newtown, Connecticut. This Phase I environmental site assessment was performed in accordance with the American Society of Testing and Materials "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Standard Practice Designation E 1527-05 ("ASTM Environmental Site Assessment Standard Practice").

The purpose of the ASTM Environmental Site Assessment Standard Practice is to: "define good commercial and customary practice in the United States of America for conducting a Phase I environmental site assessment of a parcel of commercial real estate with respect to the range of contaminants within the scope of Comprehensive Environmental Response, Compensation and Liability Act (CERCLA) and petroleum products. As such, this practice is intended to permit a user to satisfy one of the requirements to qualify for the innocent landowner, contiguous property owner, or bona fide prospective purchaser limitations on CERCLA liability (hereinafter, the "landowner liability protections or "LLPs"): that is, the practices that constitute "all appropriate inquiry into the previous ownership and uses of the property consistent with good commercial or customary practice" as defined in 42 USC § 9601(35)(B)".

In defining a standard of good commercial and customary practice for conducting an environmental site assessment of a parcel of property, the goal of the processes established by the practice is to identify "recognized environmental conditions". The term "recognized environmental conditions" means: "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term includes hazardous substances or petroleum products even under conditions in compliance with laws. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment and that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies. Conditions determined to be de minimis are not recognized environmental conditions".

This Phase I environmental site assessment of the Subject Property was conducted by R. W. Bartley & Associates, Inc. (RWB&A) for The Town of Newtown. The Town of Newtown requested the Phase I environmental site assessment because the Town of Newtown is applying for development funding. The purpose of performing the Phase I environmental site assessment of the Subject Property is to determine if "recognized environmental conditions" exist at the Subject Property in accordance with the ASTM Environmental Site Assessment Standard Practice.

2.2 Detailed Scope of Services

RWB&A's scope of services consisted of the following activities:

- Review of Federal and state regulatory agency databases identified by ASTM Environmental Site Assessment Standard Practice for environmental information on the Subject Property and other categories of properties within selected radii from the Subject Property;
- Contact with local and state regulatory agencies to inquire about environmental conditions at the Subject Property and properties in its immediate vicinity;
- Review of the Subject Property history through recommended and available ASTM Environmental Site Assessment Standard Practice standard historical sources;
- A Subject Property reconnaissance to make surface observations for evidence of recognized environmental conditions;
- A vicinity reconnaissance of properties within one quarter mile of the Subject Property;
- A review of operations at adjoining properties to identify the potential use and/or release of petroleum products or hazardous materials;
- Interviews with owner's representatives and knowledgeable individuals regarding current and past Subject Property use; and
- Preparation of this report of findings.

This report presents RWB&A's field observations, assessment results, and opinions; and is subject to the limitations detailed in Appendix A and below. This report is organized in accordance with the suggested report outline contained in the most recent ASTM Environmental Site Assessment Standard Practice.

2.3 Significant Assumptions

Significant assumptions related to the observation and conclusions of this Phase I environmental site assessment are:

> None

2.4 Limitations and Exceptions

The following limitations and/or impediments to the completion of the Phase I environmental site assessment in accordance with ASTM Standard Practice E1537-00 were encountered:

> Inspections of the interior of the buildings were limited because: 1) there was no electric service and the basement inspections were carried out with flashlights; and 2) because some rooms were locked and could not be accessed by the security personnel.

See Appendix A for a listing of other standard Phase I environmental site assessment limitations.

2.5 Special Terms and Conditions

No special terms or conditions were established for the performance of this Phase I environmental site assessment.

2.6 User Reliance

This report was prepared for the exclusive use of the Town of Newtown. No other parties are entitled to rely on the conclusions, observations, specifications, or data contained therein without the express written consent of the Town of Newtown and RWB&A This report was prepared pursuant to a proposal/agreement between the Town of Newtown and RWB&A. All uses of this report are subject to, and are deemed to be in acceptance of, the conditions and restrictions contained therein and in the proposal/agreement.

3.0 SITE DESCRIPTION

3.1 Subject Property Location and Description

The Subject Property is located in Newtown, Connecticut, which is located in western Connecticut. The location of the Subject Property is shown on the topographic "Fairfield Hills-Location Map" included behind the "Figures Tab" of this report.

The Subject Property consists of approximately 185 acres. The developed portion "main campus" is generally clustered on 100 acres with interior roads. The main campus at the Subject Property consists primarily of large two and three story brick institutional buildings ranging from 15,000 square feet to 200,000 square feet plus 10 single-family homes and 5 duplexes that housed staff, a water reservoir storage building, and a "chiller house" associated with air conditioning equipment. All but one of the single-family homes used for administrative purposes are currently vacant.

3.2 Site and Vicinity General Characteristics

The building arrangement, grounds and landscaping are all suggestive of a campus-like setting. Much of the 185-acre property is located on land consisting of open space, rolling hills and trees. See the figure "Fairfield Hills – Natural Systems and Site Inventory" located behind the "Figures" tab for further information on the site settings.

The Subject Property is located in the center of a rural, primarily residential Connecticut town. Land uses in the vicinity of the site include residential development, the Garner Correctional Facility (state prison), senior citizen housing, a school, former Fairfield Hills Mental Health Hospital support buildings, state designated open space assigned in perpetuity to the State Department of Agriculture, and the Governor's Horse Guard Equestrian Center. The site is located in an area that is a federally designated sole source aquifer for the region.

3.3 Current Use of the Property

The Subject Property is covered by a Master Plan approved by the Newtown planning and zoning commission in accordance with the Fairfield Hills Adaptive Reuse (FHAR) zoning regulations. The following principal and accessory uses and structures are permitted under FHAR zoning. Uses that are not listed as permitted shall not be permitted by variance. Permitted Uses:

- > Corporate headquarters for one or more corporations
- > Banks, financial institutions
- > General, professional, governmental, town and Board of Education offices
- Medical and dental offices
- > Research and development facilities dedicated to the development and/or testing of products or specimens
- > Publishing establishments

- > Hospitals
- > Conference center or meeting halls
- > Recreational or sport facilities and fields, indoor or outdoor
- ➤ Shops and stores for retail sales, (limited to no more than 10,000 sq. ft. per tenant)
- Shops where personal services are offered (including, beauty salon or barber shop, day spa, dry cleaning services that do not conduct on-site cleaning, gymnastics, fitness centers, shoe repair, tailoring or dressmaking, photographic studio, copy center, rental services, counseling services)
- Restaurants, (including outside service, but excluding drive-thru facilities)

Municipal town Hall complex:

- ➤ Government uses, (Excluding dumps, incinerators, recycling centers, transfer stations and other garbage disposal or handling areas, municipal garages or public works storage yards)
- Educational facilities, (including accessory housing and sport facilities)
- > Museums
- > Art galleries
- > Cultural centers
- > Performing art theatres
- > Public library
- > Senior center, teen center, child day care centers and elderly day care centers
- Nursery, greenhouse (provided that such is clearly incidental to a permitted use)
- > Crop farming in open space areas
- > Structured parking (providing that such parking is clearly incidental to a principal permitted use).

Residential reuse of existing buildings or new residential development of any kind, with the exception of housing accessory to an educational facility, is excluded from consideration by the Authority.

At this time all the institutional and residential buildings are vacant except for one home used for administrative purposes and the "chiller" building used for storage of emergency equipment. One of the institutional buildings, the Fairfield building, has been demolished and a baseball field for town resident use was constructed. Another institutional building, the Bridgewater building was demolished and a private commercial athletic building is being constructed. A third institutional building, the "Newtown" building has been leased for renovation and medical office use. A fourth building, the "Bridgeport" building is being renovated for town office use.

Information on the Subject Property buildings is included in the table below.

Table 1- Subject Property Buildings Information

Building Name	Approximate Year Completed	Number Stories	Square Footage	Basement	Past Use	Current Use
Woodbury					Employee	
Hall	1934	2	20,118	Finished	housing	Vacant
						Will be renovated for

Reservoir					Drinking	Drinking water
Storage	1933 & 1955	1	1,332	N/A	water storage	storage
Chiller House		1		N/A	Air conditioning equipment	Being renovated for fire department use

Town residents also use the property for recreation including soccer, walking, and hiking.

3.4 Descriptions of Structures, Roads, Other Improvements on the Site

Due to its past use as a state hospital, the Subject Property has a fully developed utility infrastructure including public water, sanitary sewers, storm drainage, and electric and telephone service. This infrastructure is of varying ages and conditions depending on the specific systems. However, in general, the systems date back to the 1930's when the hospital was originally opened with a variety of upgrades over the years.

Natural gas is available in the vicinity of the Subject Property.

A Subject Property utility map is included behind the "Figures" tab of this report. The following is a description of the existing water, sanitary sewer and storm water systems at the Subject Property.

3.4.1 Water System

Water is supplied to the Subject Property by two stratified drift wells (#7 and #8) located near the Pootatuck River off the Subject Property to the northeast on land owned by the Pootatuck Fish & Game Club (PFGC). Water is conveyed from the pump house at the Pootatuck River to two storage tanks on the southeast side of the Subject Property. These two in-ground concrete tanks, or bunkers, are reportedly of 500,000 gallon capacity each. These were originally open storage, but were later covered for water quality purposes.

Most of the water mains were installed in the 1930's. Newer mains serve Garner Correctional Institute (8 inch diameter) and the Nunnawauk Meadows Housing Complex (10 inch diameter), and a newer 16 inch main was installed on the Subject Property in the 1950's to improve fire protection capability.

3.4.2 Wastewater Collection System

The sewer system serving the Subject Property was constructed concurrent with the original development of the property. This sewer system did discharge to the Fairfield Hills Mental Health Hospital wastewater sewage treatment plant located to the north of the Subject Property. This plant is now abandoned and the Subject Property sewage is conveyed to the Town of Newtown sewage treatment plant.

3.4.3 Storm Water System

The Subject Property storm water system collects surface water and groundwater from several sources. A stream that drains onto the Subject Property from the Nunnawauk Meadows area is collected near the Litchfield building. Catch basins capture surface water from parking lots, roadways and lawn areas. Most buildings are connected to the drainage system, where storm water from roof drains and groundwater from foundation drains enter into the system. Storm water from the developed portion of the Subject Property is conveyed through underground pipes to Deep Brook to the north of the Subject Property.

Storm water at the undeveloped portions flows to either the Pootatuck River for the northeastern portion of the Subject Property or to Deep Brook.

3.5 Current Uses of Adjoining Properties

Current uses of adjoining properties are as follows.

North

Wasserman Way Road, other former Fairfield Hills Mental Health Hospital properties also owned by the town used for a school and town maintenance buildings; and property owned by the State of Connecticut used by the Governor's Horse Guard

East

Former Fairfield Hills Mental Health Hospital undeveloped property still owned by the State of Connecticut and the state-owned Gardner Correctional Institute

South

Undeveloped and residential

West

Mile Hill Road South Road and then residential, a railroad track, and Deep Brook

4.0 USER PROVIDED INFORMATION

The ASTM Environmental Site Assessment Standard Practice defines the "user" as the party seeking to use Practice E 1527 to complete an environmental assessment of the property. A user may include, without limitation, a potential purchaser of the property, a potential tenant of the property, an owner of the property, a lender, or a property manager.

The owner's representative interviewed is Mr. Fred Hurley, Jr., the Town of Newtown Director of Public Works.

4.1 Ownership Records

Mr. Hurley stated that the Subject Property is owned by the Town of Newtown and was purchased from the State of Connecticut Department of Public Works in 2004.

4.2 Environmental Liens or Activity and Use Limitations

Mr. Hurley was not aware of any environmental liens or environmental use restrictions associated with the property.

4.3 Specialized Knowledge

Mr. Hurley did not provide information that is considered specialized knowledge.

4.4 Commonly Known or Reasonably Ascertainable Information

It seems to be common knowledge based upon interviews with the town historian and staff at the Town Assessor's Office that prior to the purchase of the property by the state for use as the Mental Health Hospital in the 1930s, the land was farmland or undeveloped.

4.5 Valuation Reduction for Environmental Issues

Mr. Hurley stated that the purchase of the property was discounted for environmental issues, primarily, asbestos-containing materials in the Subject Property buildings and pesticide and lead soil contamination around the buildings.

4.6 Owner, Property Manager, and Occupant Information

The Subject Property is managed for the Town of Newtown by the DeMarco Management Company. DeMarco Management has provided 24-hour security at the Subject Property since

the town purchased the property. Only two buildings are currently occupied – the former Engineer's cottage is occupied by the town and DeMarco Management as administrative offices and the former Laundry building is used by the Town's Parks and Recreation Department for equipment maintenance and Board of Education for storage.

4.7 Reason for Performing Phase I

The Town of Newtown is applying for development grants and a Phase I Environmental Site Assessment has been requested by the granting agencies.

4.8 Other

No other user-provided information was obtained.

5.0 RECORDS REVIEW

5.1 Standard Environmental Records Sources

The following section presents information on the Subject Property and vicinity properties based upon public information obtained from various Federal, state, and local agencies that maintain environmental regulatory databases and files. These databases and files provide information about the regulatory status of a property and instances involving use, storage, spillage, or transportation of petroleum products or hazardous materials. The Environmental Records Search Company (ERS), a professional electronic database search service, gathered electronic environmental database information for RWB&A. RWB&A obtained more specific regulatory information by review of specific environmental regulatory files available to the public and from information contained in previous environmental reports on the Subject Property.

The American Society of Testing and Materials (ASTM) "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Standard Practice Designation E 1527-05 recommends search distances for each particular type of site/potential environmental release of petroleum products or hazardous substances that may result in an environmental impact at the Subject Property. Each search distance is commensurate with the potential seriousness of the type of site/release. The search distance should start at the Subject Property boundary but the electronic file search is originated at a point. Because of the size of the Subject Property the recommended search distances for each type of site/release was extended by one-half mile to account for the Subject Property boundaries being a distance from the center of the Subject Property.

Federal and state regulatory information obtained from ERS by searching electronic environmental databases is summarized below in Sections 5.1.1 and 5.1.2. Section 5.1.1 provides Federal information and Section 5.1.2 provides state information. The full ERS report is presented in Appendix D. Specific additional information from state and local regulatory files are summarized below in the section relevant to the information obtained.

5.1.1 Federal Agency Database Review

Information from nine primary Federal electronic databases identified in the table below was provided by EDR and reviewed by RWB&A. This information and other information obtained by RWB&A for facilities within the ASTM-recommended search distances plus ½ mile are presented below. The ASTM standard recommended search distances are given in the table below. These search distances were extended by ½ mile for this Phase I environmental site assessment for the reasons given above.

Database (type of facility or site)	Radius Searched	
National Priorities List (NPL) sites	1 Mile	
Delisted National Priorities List (NPL) sites	1/2 Mile	
Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) sites	1/2 Mile	
CERCLIS NFRAP sites	1/2 Mile	
RCRA CORRACTS facilities list	1 Mile	
RCRA non-CORRACTS TSD facilities list	1/2 Mile	
RCRA Generator Facilities Database (Large Quantity and Small Quantity Generator Databases)	Property and adjoining properties	
Institutional control/engineering control registries	Property only	
Emergency Response Notification System (ERNS) List	Property only	

5.1.1.1 National Priorities List (NPL) Sites

The National Priorities List (NPL), or Superfund sites list, is the United States Environmental Protection Agency's (US EPA's) database of confirmed, uncontrolled or abandoned hazardous waste sites identified for priority remedial actions under the Superfund program.

The electronic environmental database search report did not identify the Subject Property or any other facilities within one and one-half miles as current or proposed NPL sites.

5.1.1.2 Delisted National Priorities List (NPL) Sites

Delisted NPL, or Superfund sites list, sites are those that have been removed from the list because work at the site has been completed and the risks mitigated.

The electronic environmental database search report did not identify the Subject Property or any other facilities within one mile as delisted NPL sites.

5.1.1.3 Comprehensive Environmental Response, Compensation, and Liability Information System (CERCLIS) Sites

The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the US EPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the

Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the NPL and sites which are in the screening and assessment phase for possible inclusion on the NPL.

The electronic environmental database search report did not identify the Subject Property as a CERCLIS site. The search did identify two sites within one mile of the Subject Property as discussed below.

Noranda Metal Industries, CT Site ID 284 located at Prospect Drive approximately 0.88 miles to the south of the Subject Property. The facility manufactured small copper and brass seamless tubing. Corrosive liquids were reportedly discharged to the ground. Electronic information indicates that the release ceased in 1970 and partial cleanup has been completed. A state cleanup order was issued in July of 1987 – Order HM-408. Contaminated soil was removed and a monitoring well was installed. Releases at this site are not expected to impact the Subject Property because of the partial cleanup under the oversight of the CT DEP, because of the distance of the site from the Subject Property, and because the site is not in an area where groundwater would flow to the Subject Property.

Harvey Hubbel, Inc., CT Site ID 281 located at 111 Prospect Drive located approximately one mile to the south of the Subject Property. The facility manufactured plastic components for electrical wiring devices and appliance parts. Metal rinsate (Nickel) and floor spills of NaOH solution and Cr-Acid solution were discharged via floor drains to nearby wetlands. Electronic file information indicates that the release ceased in 1970 and partial cleanup has been completed. A state cleanup order was issued in July of 1087 — Order HM-408. Contaminated soil was removed and a monitoring well was installed. Releases at this site are not expected to impact the Subject Property because of the partial cleanup under the oversight of the CT DEP, because of the distance from the Subject Property, and because the site is not in an area where groundwater would flow to the Subject Property.

5.1.1.4 CERCLIS No Further Remedial Action Planned Sites (NFRAP) Sites

The NFRAP report contains information pertaining to sites that were listed but have been removed from the US EPA's CERCLIS database and the information archived. Archived status indicates that, to the best of US EPA's knowledge, assessment at a site has been completed and that US EPA has determined no further steps will be taken to list this site on the NPL, unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the site is not judged to be a potential NPL site

One NFRAP site was identified within one mile of the Subject Property by the electronic environmental database search.

L.S. & Company, Inc. State Site ID 282 located at 113 S. Main Street approximately 0.98 miles to the south-southwest. The facility manufactured electronic controls and instruments.

Solvents and acids were reportedly discharged via an on-site septic system. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

5.1.1.5 RCRA CORRACTS facilities list

The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste (TSDFs). TSDFs treat, store, or dispose of the waste. CORRACTS identifies hazardous waste handlers with RCRA corrective action activity which identifies facilities where releases requiring action have occurred.

The electronic environmental database search report identified one facility located within one and one-half miles from the Subject Property.

Sorvall Products, LP located at 31 Pecks Lane between one and two miles south of the Subject Property. Database information indicates that groundwater contamination is present but that groundwater contamination and exposure has been brought under control. Releases at this site are not expected to impact the Subject Property because the migration of groundwater contamination has been brought under control, because of the distance from the Subject Property, and because the site is not in an area where groundwater would flow to the Subject Property.

5.1.1.6 RCRA non-CORRACTS TSD facilities list

This section includes RCRA facilities without corrective action. RCRA Info is EPA's comprehensive information system, providing access to data supporting the RCRA of 1976 and the Hazardous and Solid Waste Amendments Act (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by RCRA. Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste. TSDFs treat, store, or dispose of the waste.

The electronic environmental database search report did not identify the Subject Property or any other facilities within one mile as current or proposed TSD sites.

5.1.1.7 RCRA Generator Facilities Database (Large Quantity and Small Quantity Generator Databases)

The US EPA's RCRA Program identifies and tracks hazardous waste from the point of generation to the point of disposal. The RCRA Facilities Generator database is a compilation by the US EPA of reporting facilities that generate hazardous waste.

The Subject Property was identified as a generator of hazardous waste in the orphan site (no addresses) section of the electronic file search. The Subject Property is listed in state files as a no longer registered site. Hazardous waste manifest information from 1985 indicates that small amounts of a large variety of chemicals and pesticides were removed from the Subject Property. It appears that this was related to "cleaning house" or the removal of outdated and/or no longer needed chemicals. The material was transported off of the Subject Property to a disposal facility. Related information and a list of the chemicals and quantities are contained in Appendix C.

5.1.1.8 Institutional Control/Engineering Control Registries

This database includes a listing of sites with pollution engineering controls in place. Engineering controls include various forms of caps, building foundations, liners, and treatment methods to create pathway elimination for regulated substances to enter environmental media or effect human health.

The Subject Property was not listed as having pollution engineering controls. It is expected that a State of Connecticut Environmental Land Use Restriction (ELUR) will be placed on the Subject Property deed in the near future to inform the public that some soil contaminated with heating fuel remains beneath the building foundation at the location of the former outside boiler and to require that the contaminated soil be removed if the building is demolished. See the section immediately below for further information.

5.1.1.9 Emergency Response Notification System (ERNS)

The Emergency Response Notification System (ERNS) is a national database used to collect information on reported releases (i.e., spills) of petroleum and hazardous substances. The database contains information from spill reports made to federal authorities including the US EPA, U. S. Coast Guard, National Response Center, and Department of Transportation.

One ERNs notification was identified at the Subject Property at 4 Fairfield Circle South. Little information was given in the electronic database report but this notification most likely relates to the release of heating fuel from an external heating boiler in early December 2003 at the Canaan building. At the time the building was owned by the state and leased to the Town of Newtown as office space. Approximately 4,500 gallons of No. 2 fuel oil spilled onto the ground when the boiler feed line broke. The oil entered the subsurface and the storm drainage system. The storm drainage system conveyed some of the oil to a local brook. The spill was remediated by the State of Connecticut. The surface spills were cleaned up, contaminated soil was excavated, and a groundwater treatment system was installed. Remediation is ongoing with the treatment of low levels of groundwater hydrocarbon contamination. This treatment is expected to be accelerated shortly by the injection of oxygen releasing compounds into the subsurface at the area of contamination. Some impacted soil remained beneath the building foundation and a State of Connecticut Environmental Land Use Restriction to inform of the contamination and to require the contaminated soil be removed if the building is demolished will be recorded on the deed. This release is considered a recognized environmental condition but is not considered a significant hazard or liability because remediation is the responsibility of the State of

Connecticut Department of Public Works, it is being monitored and overseen by the CT DEP, and because remediation to the satisfaction of the CT DEP is nearing completion.

Three additional reported spills at the Subject Property were discovered from information contained in previous environmental reports:

One was the November 1, 1998, release of approximately 20 gallons of No. 2 fuel oil at the Greenwich building. The release was caused by the boiler fitting failure. It is reported that the spill was contained and a remedial contractor was hired to clean up the spill.

The second was a one gallon diesel fuel spill from a leaking fuel line reported on January 31, 2001. The report indicates that the spill was cleaned up and the status is listed as "closed" indicating that the spill was cleaned up to the satisfaction of the CT DEP.

The third was a two gallon antifreeze and water solution spill from a vehicle coolant system was reported on September 5, 2001. The report indicates that the spill was cleaned up to the satisfaction of the CT DEP and the status is listed as "closed".

There was also a significant spill at a property adjacent to the Subject Property beyond the Subject Property search distance. The spill was at the Town of Newtown Intermediate School located across Wasserman Way from the Subject Property. The spill was the release of approximately 3,000 gallons of No. 2 fuel oil from a ruptured boiler feed line. The spilled fuel migrated to beneath the school and along a sewer line to discharge into Deep Brook. Remedial actions were taken under the oversight of the CT DEP and remediation is ongoing. This site is not expected to impact the Subject Property because the school is located in a down-gradient flow direction from the Subject Property.

5.1.1.10 RCRA Corrective Action Facilities (RCRA-CA)

The RCRA Corrective Action Facilities (RCRA-CA) database contains information pertaining to hazardous waste TSD facilities which have conducted, or are currently conducting, a corrective action as required under RCRA.

The electronic environmental database search report did not identify the Subject Property or any other facilities within one mile as current or proposed RCRA-CA sites.

5.1.1.11 Additional Federal Data Base Searches

Additional secondary Federal data bases were searched by EDR. No additional significant information was discovered. For information on the additional databases searched refer to the full EDR Radius Search report included in Appendix D.

5.1.2 State Agency Database Review

Information from eight primary state databases were provided by EDR and reviewed by RWB&A. These databases and the search distances used to review these databases are presented in the table below. This information and other information obtained by RWB&A for facilities within the ASTM-recommended search distances plus ½ mile are presented below. The ASTM standard recommended search distances are given in the table below. These search distances were extended by ½ mile for this Phase I environmental site assessment for the reasons given above.

Database	Radius Searched
Connecticut List of Hazardous Waste Sites	1 Mile
Connecticut Site Discovery and Assessment Database	1/2 Mile
Connecticut Solid Waste Disposal Facilities (SWF)	1/2 Mile
Connecticut Leaking Underground Storage Tank (LUST) Report	1/2 Mile
Connecticut Underground Storage Tank (UST) List	Property and adjoining properties
Institutional control/engineering control registries	Property only
Connecticut Voluntary Cleanup Sites	1/2 Mile
Connecticut Brownfield Sites	1/2 Mile

5.1.2.1 State Hazardous Waste Sites

The State of Connecticut maintains a list of facilities where it is known or suspected that hazardous wastes have been released to the environment.

The following sites within one and one-half mile of the Subject Property were identified in state electronic records as known or suspected that hazardous waste has been released into the environment.

Dual-Lite Inc. Site ID 1094 located at 3-6 Simm Lane 0.82 miles to the south-southwest. The facility manufactured emergency lighting. Solvents, chlorinated volatile organic compounds, PCBs, and metals reportedly discharged to an on-site septic system. Contamination of private wells recorded. Order for cleanup was issued June 21, 1991, DRD-011. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

L.S. & Company, Inc. Site ID 282 located at 113 S. Main St. approximately 0.98 miles to the south southwest. Facility manufactured electronic controls and instruments. Solvents and acids were reportedly discharged via an on-site septic system. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

Noranda Metal Industries, CT Site ID 284 located at Prospect Drive approximately 0.88 miles to the south of the Subject Property. The facility manufactured small copper and brass seamless tubing. Corrosive liquids were reportedly discharged to the ground. Metal rinsate (Nickel) and floor spills of NaOH solution and Cr-Acid solution were discharged via floor drains to nearby wetlands. Electronic information indicates that the release ceased in 1970 and partial cleanup has been completed. A state cleanup order was issued in July of 1987 — Order HM-408. Contaminated soil was removed and a monitoring well was installed. Releases at this site are not expected to impact the Subject Property because of the partial cleanup under the oversight of the CT DEP, because of the distance from the Subject Property, and because the site is not in an area where groundwater would flow to the Subject Property.

Rosberg Inc. Site ID 285 located at 15 Commerce Rd approximately 0.76 miles to the northwest. This facility manufactured leather cover boxes and presentation cases. Solvents, metals, chlorinated volatile organic compounds and semi-volatile organic compounds reportedly spilled or dumped on site. Connecticut orders for cleanup SRD-0030 and SRD-0029 issued to the company in 1992. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

Newtown Landfill Route 34 located between one and two miles northeast of the Subject Property. Municipal landfill which operated at a former gravel pit and where paint sludge, asbestos, semi-volatile organic compounds, metals, and PCBs reportedly dumped. The electronic database search indicates that the landfill is inactive and remediation was complete July 6, 1987.

Releases at this site are not expected to impact the Subject Property because of the remediation completion under the oversight of the CT DEP, because of the distance from the Subject Property, and because the site is not in an area where groundwater would flow to the Subject Property.

CERC, 27 Philo Curtis Road located between one and two miles to the northeast of the Subject Property. It is reported that metals, acids, bases, and semi-volatile organic compounds discharged to a septic tank and/or dry well. The data indicates that remediation was complete and approved by the CT DEP July 6, 1987.

Releases at this site are not expected to impact the Subject Property because of the remediation completion under the oversight of the CT DEP, because of the distance from the Subject Property, and because the site is not in an area where groundwater would flow to the Subject Property.

5.1.2.2 Connecticut Site Discovery and Assessment Database

The Subject Property and four sites not listed in the state Hazardous Waste Site list were listed in the Connecticut Site Discovery and Assessment database within one mile of the Subject Property.

The Subject Property – the Subject Property is listed in the state database because upon transfer of the ownership of the property from the state to the Town of Newtown a Connecticut Property Transfer Act Form III was submitted to the CT DEP indicating that release of petroleum products or hazardous substances had occurred at the property. The "areas of concern" identified were a release of No. 2 heating fuel at a Yale Laboratory UST, the presence of pesticides in the soil around the foundations of the buildings, the presence of pesticide groundwater contamination, the presence of lead from lead paint in the soil around the buildings, and a release of the dry cleaning solvent PCE to soil and groundwater at the former laundry building which is located across Wasserman Way from the Subject Property. As part of the filing the Town of Newtown agreed to investigate and remediate the property to the State of Connecticut Remediation Standard Regulations criteria.

Additionally, surface water and groundwater collected in Subject Property building footing drains discharges to Deep Brook north of the Subject Property. Currently the discharge to Deep Brook does not meet appropriate surface water criteria for the pesticide dieldrin. As part of the sale of the property from the state to the town, the state agreed to remediate surface water and groundwater discharging from the site to Deep Brook if pesticide soil remediation carried out by the town at the Subject Property did not lower the concentrations of pesticides in the surface water and groundwater such that the discharge to the Deep Brook meets appropriate surface water criteria.

Alliance Energy/Exxon Corporation Site ID 1920 located at 75 S. Main St. approximately 0.73 miles to the southwest. A leaking underground storage tank on-site resulted in the release of non-chlorinated volatile organic compounds to the subsurface environments on-site. Free product of petroleum compounds reported in a monitoring well. Leaking waste oil tank discovered and reported on June, 6, 2008. Data indicates that the site has applied for state UST clean up funds, Account ID 412. Two tanks reported to be removed from the site in October of 1995. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

Parker's Garage Site ID 1866 located at 47 S. Main St. approximately 0.73 miles to the west of the Subject Property. Hydraulic oil and non-chlorinated volatile organic compounds reportedly discharged and dumped on site. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

Budget Dry Cleaning Site ID 2883 located at 43 South Main Street 0.79 miles to the west. Contamination was discovered in 1989 and a water main was extended to the area. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject

Property and because the site is not in an area where groundwater would flow to the Subject Property.

Amaral Motors, Inc. Site ID 3030 located at 40 South Main Street 0.85 miles to the southwest. Chlorinated and non-chlorinated volatile organic compounds were reportedly discharged to an on-site drywell. On March 26, 1989, a state inspector found that vehicle wash water and an oil/water separator discharged to a dry well. It is also reported that the drains were sealed. Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

5.1.2.3 Solid Waste Disposal Facilities (SWFs)

The Connecticut Solid Waste Disposal Facilities list is a comprehensive listing of all reported active and inactive solid waste disposal facilities located in the State of Connecticut.

No Connecticut Solid Waste Disposal Facilities were identified within one mile of the Subject Property by the electronic environmental database search.

Review of the Former Fairfield Hills Mental Health Hospital records indicate that a landfill associated with a former Fairfield Hills Mental Health Hospital incinerator is located to the northeast and adjacent to the Subject Property. Records indicate that the landfill is closed but groundwater contamination may be present. This site is not expected to impact the Subject Property because the site is in a down-gradient groundwater flow direction from the Subject Property.

5.1.2.4 State Leaking Underground Storage Tank List (LUSTs)

The Connecticut LUST list is a comprehensive listing of all reported active and inactive leaking underground storage tanks located in the State of Connecticut.

A review of the electronic environmental database search information indicated that there were six facilities identified within one mile of the Subject Property.

Alliance Energy/Exxon Corporation Site ID 1920 located at 75 S. Main Street approximately 0.73 miles to the southwest. A leaking underground storage tank on-site resulted in the release of non-chlorinated volatile organic compounds to the subsurface environments on-site. Free product of petroleum compounds reported in a monitoring well. Leaking waste oil tank discovered and reported on June 6, 2008. Data indicates that the site has applied for state UST clean up funds, Account ID 412. Two tanks reported to be removed from the site in October of 1995.

Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

Newtown Country Club, 54 South Main Street between one-half and one mile to the west of the Subject Property. The database indicates that soil contamination with gasoline at a UST was discovered in 1998. The database indicates that the contaminated soil would be removed.

Releases at this site are not expected to impact the Subject Property because of the distance from the Subject Property and because the site is not in an area where groundwater would flow to the Subject Property.

Trudeau's Service Station, Route 25 approximately 0.73 miles to the west. The release was reported as a gasoline release. Three 6,000 gallon underground storage tanks were removed. Remediation is reported as initiated.

Due to the initiation of remediation, because of the distance of this site from the Subject Property, and because this site is not in an up-gradient groundwater flow location to the Subject Property this release is not expected to impact the Subject Property.

Bulman, 3 Park Lane approximately 0.76 miles to the southwest of the Subject Property. Database information indicates the reporting of a tank failure in 1998. The release is listed as "closed" by the CT DEP.

Due to the closed status, because of the distance of this site from the Subject Property, and because this site is not in an up-gradient groundwater flow location to the Subject Property this release is not expected to impact the Subject Property.

Lampcrafters, 124 South Main Street located approximately 0.81 miles to the south southwest from the Subject Property. Database information indicates the reporting of a 550 gallon heating oil tank failure in 1996 with soil contamination that was to be removed. The release is listed as "closed" by the CT DEP.

Due to the closed status, because of the distance of this site from the Subject Property, and because this site is not in an up-gradient groundwater flow location to the Subject Property this release is not expected to impact the Subject Property.

Newtown Historical Society, 34 South Main Street located approximately 0.94 miles to the west northwest from the Subject Property. The release was reported in 1994. No additional information was given.

Because of the distance of this site from the Subject Property and because this site is not in an up-gradient groundwater flow location to the Subject Property this release is not expected to impact the Subject Property.

5.1.2.5 State Underground Storage Tank List (USTs)

The Connecticut UST List is a comprehensive listing of all registered active and inactive USTs located within the State of Connecticut.

A review of the electronic environmental database search information and review of State files does not list USTs on the Subject Property but does list USTs on other former Fairfield Hills Mental Health Hospital property as indicated in the table below.

Table 2 – CT DEP Registered USTs at the Subject Property and Adjoining Properties

Tank ID	Current or Former Location	Contents	Tank Size (gallons)	Installed Date	Removed Date
A1	Power Plant	No. 4 Heating Oil	30,000	1952/lined 1975	
A2	Power Plant	No. 4 Heating Oil	30,000	1952/lined 1975	
A3	Power Plant	No. 4 Heating Oil	30,000	1952/lined 1975	
A4	Power Plant	No. 6 Heating Oil	30,000	1952/lined 1975	
A5	Power Plant	No. 6 Heating Oil	30,000	1952/lined 1975	
A6	Power Plant	Waste Oil	275	1956	1992
B1	Vehicle Maintenance Garage	Unleaded Gasoline	4,000	1977	1995
B2	Vehicle Maintenance Garage	Unleaded Gasoline	4,000	1980	1995
В3	Vehicle Maintenance Garage	Waste Oil	275	1980	1995
B4	Vehicle Maintenance Garage	Diesel fuel	2,500	1992	
C1	Watertown Hall	No. 2 Heating Oil	4,000	1992	1994
R1	Vehicle Maintenance Garage	Diesel Fuel	2,500	1992	
ВС	Vehicle Maintenance Garage	Waste Oil	550	1992	
B3R1	Not specified	Waste Oil	550	1992	

Investigations at the Subject Property discovered two USTs on the Subject Property. One UST located at the Yale Laboratory building that fueled the incinerator located in the basement of Yale Laboratory had been removed but soil and groundwater contamination remained. This release was remediated by the Town of Newtown at the time of the pesticide contaminated soil remediation in 2005/2006. The second UST is located between single family homes 51 and 52 and contains heating fuel for both homes. The capacity of this tank is unknown but it is likely a small tank. This UST is still in use. Investigations at the site of the tank were carried out by the Town of Newtown as part of their overall site investigation prior to the purchase of the property from the State of Connecticut. The investigations indicate that this UST has not leaked.

The State of Connecticut Department of Public Works contracted with two environmental consulting firms in the 1990s to remove USTs at the Fairfield Hills Mental Health Hospital. The

firms were Metcalf and Eddy and Fuss and O'Neill. Information about this work is provided in reports prepared by the firms dated August 1993 and February 21, 1996 respectively. Information from these reports is provided in the table below.

Table 3 – Tank Removal Information
Taken from Metcalf & Eddy, Inc. August 1993 Report

Tank No.	CT DEP Registration No.	Size (Gallons)	Tank Contents	Tank Locations	Current Status
1	A6	275	Waste Oil	Power Plant	Removed: soil contamination encountered. Three cu. yds. of contaminated soil removed. TCLP Lead and hydrocarbon impacted soils remained in the tank grave following initial excavation. No further soil excavation conducted due to structural constraints. Consultants recommended a down gradient monitoring well.
2	None recorded	2000	No. 2 Heating Fuel	Adjacent to abandoned incinerator building	Removed: no contaminated soil encountered by consultants upon removal, therefore, no remedial actions were taken upon removal. Closure soil samples taken.
3	None recorded	1000	No. 2 Heating Fuel	Sewage treatment plant	Removed: no contaminated soil encountered by consultants upon removal, therefore, no remedial actions were taken upon removal. Closure soil samples taken.
4	None recorded	275	Waste Oil	Maintenance garage	Removed: soil contamination encountered. TCLP Lead and hydrocarbon impacted soils remained in the tank grave following initial excavation. 40 yd. ³ of contaminated soil removed. Consultants concluded: "the second set of closure soil samples collected indicated no additional contaminated soil remained".

¹ The information from these reports was summarized in a Phase I Environmental Assessment report prepared by the Maguire Group, Inc. under contract to the Connecticut Department of Public Works. The Report is titled "Transfer Act Site Assessment, Phase I Environmental Site Assessment, Parcel 5 of Fairfield Hill Hospital, 2A Mile Hill Road, Newtown, Connecticut" and dated May 1999. This information contained in the Maguire report is reproduced in the tables.

Table 4 - Tank Removal Information
Taken from Fuss & O'Neill February 21, 1996 Report

Tank	CT DEP	Size	Tank	Tank	Current Status
No.	Registration No.	(Gallons)	Contents	Locations	Current Status
A1	A1	30,000	No. 4 Oil	Behind power plant	Removed September 30, 1998. Contaminated soils encountered during removal and contaminated soils remain at excavation site.
A2	A2	30,000	No. 4 Oil	Behind power plant	Removed September 30, 1998.
A3	A3	30,000	No. 4 Oil	Behind power plant	Removed September 30, 1998.
A4	A4	30,000	No. 6 Oil	Behind power plant	Removed September 24, 1998.
A5	A5	30,000	No. 6 Oil	Behind power plant	Removed September 24, 1998.
B1	В1	4000	Gasoline	Vehicle maintenance garage	Removed August 23, 1995. Soil contamination persists due to structural limitations. Groundwater analysis indicates contamination in excess of regulatory action levels. Installation of groundwater monitoring wells, groundwater quality monitoring, and investigation of nature and extent of contamination recommended.
B2	B2	4000	Gasoline	Vehicle maintenance garage	Removed August 23, 1995. Soil contamination persists due to structural limitations, Groundwater analysis indicate contamination in excess of regulatory action levels. Installation of groundwater monitoring wells, groundwater quality monitoring, and investigation of nature and extent of contamination recommended.
D	Not registered	550	No. 2 Fuel Oil	Building No. 42 Queen St.	Removed September 25, 1995. Contaminated soil encountered and removed. No further investigation recommended.
Е	Not registered	550	No. 2 Fuel Oil	Building No. 121 Wildlife Drive/Mile Hill Road	Removed September 25, 1995. No contaminated soil encountered. No further investigation recommended.
G	Not registered	550	No. 2 Fuel Oil	Building No. 46 Queen St.	Removed September 26, 1995. No contaminated soil encountered. No further investigation recommended.
Н	Not registered	1000	No. 2 Fuel Oil	Building No. 122 Mile Hill Road South	Removed September 27, 1995. No contaminated soil encountered. No further investigation recommended.

				building	

The P and Q tanks at Buildings No. 50 and 51 are located on the Subject Property. The buildings are single family homes. These two individual tanks were replaced by the one tank now serving the two homes. One tank is reported to have leaked and the contaminated soil removed. Subsequent investigations by HRP in 2000 for the State of Connecticut and by RWB&A in 2004 for the Town of Newtown have confirmed that petroleum contamination is not currently present at these former tank locations.

5.1.2.6 Institutional Control/Engineering Control Registries

As discussed above, the Subject Property was not listed as having pollution engineering controls. It is expected that a State of Connecticut Environmental Land Use Restriction (ELUR) will be placed on the Subject Property deed in the near future to inform the public that some soil contaminated with heating fuel remains beneath the building foundation at the Canaan building at the location of the former outside boiler. State regulations require that the contaminated soil be removed if the building is demolished.

5.1.2.7 Connecticut Voluntary Cleanup Sites

The electronic environmental database search report did not identify the Subject Property or any other facilities within one mile as Connecticut voluntary cleanup sites.

5.1.2.8 Connecticut Brownfield Sites

The electronic environmental database search report did not identify the Subject Property or any other facilities within one mile as Connecticut Brownfield cleanup sites.

5.1.2.9 Other

No other sites of environmental significance to the Subject Property were identified in the electronic database search.

5.2 Additional Environmental Records Sources

The Town of Newtown Department of Health was contacted to determine if they had any records concerning environmental conditions at the Subject Property. Ms. Donna Culbert, the Director, stated that they did not have a file on the Subject Property covering activities prior to the town's ownership. She said that since it was state property they were not involved or informed of activities.

5.3 Physical Setting Sources

The following physical setting information is considered relevant to the environmental conditions at the Subject Property.

5.3.1 Regional Setting

The Subject Property is located in a rural area in the Town of Newtown. The area in the vicinity of the Subject Property is characterized by open spaces owned by the State of Connecticut, and areas of special use such as a Town of Newtown school, a horse boarding and training area used by the Governor's Horse Guard, a facility used to train police dogs, Town of Newtown maintenance facilities and the Gardner Correctional institute (a state prison). There is limited residential use to the west and to the south and an elderly housing complex to the south. Deep Brook is located to the west and north and the Pootatuck River to the east (see the "Newtown USGS Quadrangle" figure located behind this report's "Figure" tab).

The Subject Property is located on a plateau-type area that has a shallow bowl-type topography with a low point to the north (see the "Fairfield Hills, 3-D Topographic Map, Facing Southwest" figure located behind this report's "Figure" tab).

The Natural Diversity Data Base is maintained by the Connecticut DEP and is available on the web via the University of Connecticut's MAGIC web site. A review of this information identified no areas of concern for threatened, endangered or special concern species or critical habitats at the site.

5.3.2 Groundwater Flow

Groundwater flow at the Subject Property is to the north towards the low point of the "shallow bowl" low point (see the figure "Groundwater Elevations and Contours 10-31-03" located behind this report's "Figure" tab). This figure was generated as part of the environmental investigation of the property by this firm and is taken from the report "Phase III Investigation Report and Remedial Action Plan, Certain Parcels to be Conveyed from the State of Connecticut to the Town of Newtown, Former Fairfield Hills Hospital, Newtown, Connecticut" dated February 2004. Regional groundwater flow would be influenced by expected groundwater flows into the area's Deep Brook and Pootatuck River, but generally to north.

5.3.3 Groundwater Conditions

The groundwater at the Subject Property and in the vicinity of the Subject Property is classified by the State of Connecticut as GA groundwater. GA rated groundwater areas are areas of existing private water supply wells or an area with the potential to provide water to public or private water supply wells. The DEP presumes that ground water in such an area is, at a minimum, suitable for drinking or other domestic uses without treatment. The northeastern one-third of Subject Property study area is situated above the Pootatuck River Aquifer, a federally protected sole source aquifer.

There are areas of groundwater contamination at the Subject Property associated with past Subject Property activities and spills. There is minor but significant, limited tetachloroethylene contamination immediately north of the northeast corner of the former Laundry building. Tetrachloroethylene is a dry cleaning solvent. There is minor, but significant, petroleum hydrocarbon contamination immediately north of Yale Laboratory associated with the former underground storage tank at this location that fueled the Yale Laboratory incinerator. There is minor, but significant, petroleum hydrocarbon contamination at the northeast corner of the Canaan building associated with the spill of heating fuel at this location. There is also minor but significant contamination of the pesticide dieldrin at certain locations in the central portion of the developed portion of the Subject Property.

Remediation of all of these areas of contamination is ongoing. For all but the Canaan building, remediation consists of removal of the source of contamination and then monitoring the natural degradation of the contamination through biological and chemical breakdown of the chemical compounds and the natural dilution of the contamination. Active treatment of the groundwater is occurring at the Canaan building by extraction of the contaminated groundwater, treatment of the groundwater by activated carbon, and then discharge of the contaminated groundwater to the sewer system. Shortly, treatment of groundwater at the Canaan building will be enhanced by the injection of oxygen-releasing compounds to the subsurface.

All groundwater remediation is being performed under the oversight of the CT DEP. The Canaan building remediation is being conducted by the Connecticut Department of Public Works under the Connecticut spill regulations. The other groundwater remediations are being conducted by the Town of Newtown under the Connecticut Property Transfer Act and the Connecticut Remediation Standard Regulations.

All of the groundwater contamination is local to the sources of contamination that have been removed. Neither drinking water supplies nor private wells are threatened by this groundwater contamination. The groundwater contamination is not located above the Pootatuck River Aquifer area.

5.3.4 Geologic Setting

According to the Surficial Materials Map of Connecticut the natural surficial material for the majority of the property is expected to be deposits of till and stratified drift. Till and stratified drift are "composed of mixtures of gravel, sand, silt, and clay". (Stone, et al 1990).

According to the Bedrock Geological Map of Connecticut the bedrock in the area of the Subject Property is "Brookfield Gneiss". Brookfield Gneiss is a dark and light, medium- to course-grained dioritic gneiss. Dioritic gneiss is a dark-and light, medium- to coarse- grained, compositionally banded metamorphic rock of dioritic composition. Diorite is a light and dark medium- to course- grained intrusive ingneous rock, commonly massive appearing, generally lacking layering or banding; composed primarily of plagioclase feldspar, quartz and dark minerals (Rogers, 1985). No bedrock outcrops were noted at the Subject Property.

5.3.5 Surface Water

The eastern half of the site is in the Pootatuck River drainage basin of the Housatonic River main stem drainage basin. The western half of the site drains to Deep Brook which drains to the Pootatuck River (see the drainage basin figure "Newtown USGS Quadrangle" located behind this report's "Figure" tab for the location of the Deep Brook drainage basin).

Surface water flow at the developed portion of the Subject Property is collected in site catch basins and conveyed through the Subject Property drainage system to Deep Brook. Surface water flow at undeveloped areas is by overland flow to the respective drainage basin, either Deep Brook for the south and western portions of the property or the Pootatuck River for the northeast approximately one-third portion of the Subject Property.

5.4 Historical Use Information on the Subject Property

Historical aerial photographs, historical maps, and town land records were examined to determine the use history of the Subject Property. The information obtained is summarized in the sections below.

5.4.1 Historical Town Maps

Historical town maps at the Assessor's office and on display on the walls of the town's Booth Library, and in the files of the Fairfield Hills Mental Health Hospital were reviewed to determine the historical use of the Subject Property. A 1929 map reviewed in the town Assessor's office and on display at the Booth Library shows the Subject Property either undeveloped or in use as

farmland. A pre-development map in the former Fairfield Hills Mental Health Hospital engineer's office indicates that the Subject Property was undeveloped prior to the state's purchase. This map was photographed and is included behind this report's "Figure" tab.

5.4.2 Historical Aerial Photographs and Topographic Maps

Historical topographic maps and aerial photographs for the Subject Property dated 1934, 1943, 1951, 1953, 1963, 1965, 1970, 1972, 1975, 1980, 1985, 1990, and 1996 were reviewed. A print of the 1934 aerial photograph is included behind the "Figures" tab of this report. A summary of the Subject Property use based upon a review of this information is contained in the table below.

Table 5 – Subject Property Historical Topographic Map and Aerial Photograph Use Information

Photograph/Map Date	Subject Property Uses
1934 Aerial	The Subject Property is partially developed as the Fairfield Hills Mental Health Hospital. The buildings present are the Newtown, Woodbury, Shelton, Bridgeport, Greenwich, Danbury, Stratford, Stamford, and Norwalk buildings. The duplexes are also present. Other areas later developed appear to have had been cleared.
1943-Торо Мар	All buildings are present except for Plymouth, Cochran, the Chiller building, and Bridgewater.
1951-Aerial 1953 Topo	All buildings are present except the Chiller and Cochran buildings
1965 to 1996 Aerials 1963 to 1972 Topos	The Subject Property appears fully developed as the Fairfield Hills Mental Health Hospital.

5.5 Historical Use Information on Adjoining Properties

Historical aerial photographs and historical topographic maps, and Town of Newtown land records were examined; and interviews were conducted to estimate the use history of property adjoining the Subject Property and in the vicinity of the Subject Property. The information obtained is summarized in the sections below.

5.5.1 Historical Aerial Photographs and Topographic Maps

Historical topographic maps and aerial photographs for the Subject Property area dated 1934, 1943, 1951, 1953, 1963, 1965, 1970, 1972, 1975, 1980, 1985, 1990, and 1996 were reviewed. A

summary of the Subject Property area use based upon a review of this information is contained in the table below.

Table 6 - Historical Topographic Map and Aerial Photograph Information

Photograph/Map	Subject Property Vicinity Property Uses			
Date	North	East	South	West
1934-Aerial	Fairfield Hills Mental Health	Undeveloped land and Fairfield Hills	Undeveloped land and residential	Residential, railroad tracks, and Deep
1943-Торо	Hospital support	Mental Health	and residential	Brook
1951-Aerial	buildings and undeveloped land.	Hospital Incinerator

1996-Aerial		Gardner Correctional Institute		

6.0 SITE RECONNAISSANCE

A Subject Property and vicinity reconnaissance was conducted on June 25, 2008.

6.1 Methodology and Limiting Conditions

The Subject Property inspection was accomplished by walking the Subject Property and observing the interior of the Subject Property structures.

6.2 General Site Setting

The Subject Property is a campus-like setting. The main portion of the property containing the buildings is landscaped with grass and numerous trees. All of the utilities are underground in utility tunnels or otherwise buried. The undeveloped portions of the property are woods or hay fields. The buildings were heated with steam generated off site at the power plant and piped underground to the buildings. The former power plant is located to the north of the Subject Property. Sewage was collected and piped to offsite treatment plants; first to the Fairfield Hills Mental Health Hospital dedicated treatment plant then to the Town of Newtown treatment plant. All of the Fairfield Hills Mental Health Hospital maintenance buildings were located off of the Subject Property to the north.

6.3 Exterior Observations

The following exterior observations were made.

6.3.1 Hazardous Substance/Petroleum Product Containers and Unidentified Substances

No containers were observed exterior to the Subject Property buildings.

6.3.2 Storage Tanks

There is a heating oil underground storage tank located between single family homes 51 and 52. Subsequent investigations by HRP in 2000 in for the State of Connecticut and by RWB&A in 2004 for the Town of Newtown have confirmed that petroleum contamination is not currently present at this tank location.

6.3.3 Staining

No staining was observed except normal automobile oil staining at asphalt parking areas and some minor oil staining at the abandoned temporary Greenwich building boiler.

6.3.4 Indications of PCBs

PCBs may be contained in oil-filled transformers and fluorescent light capacitors. The State of Connecticut Department of Public Works had information gathered in 1990 regarding the transformers at the Fairfield Hills Mental Health Hospital. The work was performed by Fuss & O'Neill of Manchester, Connecticut, a contractor to the Department of Public Works. Transformers at the Subject Property are located in rooms called "transformer vaults" in the basements or tunnels. Under this Fuss & O'Neill contract transformers at the hospital were inventoried, photographed, and the dielectric fluid sampled for PCBs. In addition, spills of dielectric fluid were noted, photographs were taken, diagrams of transformer vaults prepared, drains in vaults noted, and vault drains sampled if the potential was present for transformer dielectric fluid to have entered the drain. Berms were also constructed where appropriate to keep spilled transformer dielectric fluid from entering floor drains where that potential was present.

General information from this survey is provided below in the table "FH Transformer Information" below.

Table 7 – FH Transformer Information

Transformer Vault	Sampled?	Staining?	Floor Drain?	Berm Installed?
Canaan House	Yes	Some local to transformers	Yes	Yes
Bridgeport	Yes	Significant	Yes	Yes
Laundry	Yes	Some local to transformers	No	No
Cochran	Yes	No	No	Yes
Kent	Yes	No	Yes	No
Litchfield	Yes	No	Yes	No
Stamford	Yes	Some local to transformers	No	No
Greenwich	Yes	Some local to transformers	No	No
Shelton	Yes	No	No	No
Plaza	Yes	Some	No	No
Staff House 54	Yes	No	No	Yes
Fairfield House	No	No information	No information	No information

The sampling of the dielectric fluid in the transformers indicated that Subject Property transformers generally contained between 5 and 13 milligrams of PCBs per liter of dielectric

Shelton

fluid (mg/l). A list of the transformers at the Subject Property with information including the PCB content of the dielectric fluid is included in Appendix E.

The dielectric fluid from selected transformers was again sampled for PCB content on December 12, 2003. Five transformers were sampled. The Reuter Haney Company of Ivyland, PA, performed the sampling under subcontract to RWB&A. The transformer dielectric fluid was sampled for PCBs to compare the results to the earlier 1990 sampling. This re-sampling was performed because information obtained about the earlier sampling indicated that the laboratory results were incorrectly reported and were adjusted. The 2003 sampling was performed to check the reported results. The 2003 sampling indicated that the reported results were accurate within normal sampling and analytical precision. The 2003 sampling results as compared to the previous sampling results are provided below in the table "Parcel 5 Transformer Sampling Results" below.

Transformer Vault	Transformer Serial #	1990 Result	12/12/03 Result
Fairfield House	5910021	Not Sampled	120
Greenwich	S80K22	6.7	11
Laundry	C-121400	9.5	7.8
Kent	9984	8	11

9.5

7.4

Table 8 Parcel 5 Transformer Sampling Results (mg/l)

The Fairfield building transformer would be considered a PCB transformer by regulation because the concentration of PCBs is greater than 50 mg/l. The Fairfield building transformer was removed prior to the recent demolition of the building.

S35179

The information from the 1990 survey and recent observations indicate that dielectric fluid leaks from some of the transformers, at the Subject Property, particularly the Stamford and Greenwich building transformers have occurred but have not resulted in releases of transformer dielectric fluid beyond the confines of the transformer vaults. The 1990 information and the 2003 sampling indicate that the concentrations of PCBs in the transformers dielectric fluid are relatively low.

Concentrations of PCBs in the dielectric fluid in the transformers might have been higher in the past. PCBs had not been invented when the facility was built but some transformers may have had their fluid changed more than once and the previous fluids may have contained higher concentrations of PCBs. Also, some of the transformers are newer than what would be expected of original equipment from the 1930s.

One pad-mounted transformer was observed in a fenced area near the Chiller House. The area

appeared clean and well maintained and staining was not observed.

6.3.5 Indications of Solid Waste Disposal

Small areas of potential filling/dumping were investigated by HRP Associates in 2000 as part of their Phase II Environmental Investigation performed for the State of Connecticut Department of Public Works. Their findings were provided in their report "Phase II Subsurface and Surficial Environmental Investigation at the Fairfield Hills Hospital, Parcel 5, 20A Mile Hill Road, Newtown, Connecticut" dated February 29, 2000.

Small potential areas of filling/dumping were observed by HRP at the water reservoir bunkers, behind Litchfield House, behind Bridgewater House, and behind the storage shed between Kent and Fairfield Houses. Test pits were dug in these areas and soil samples were taken and analyzed for a wide range of metals and chemical compounds. Visual observations did not indicate dumping of hazardous substances or petroleum compounds. Material suspected to be street sweepings was observed at suspected dumping areas near the water reservoir bunkers. Analyses of soil samples did not indicate concentrations of petroleum products, metals or chemical compounds at concentrations greater than applicable State of Connecticut Remediation Standard Regulations criteria.

There is no evidence that dumping of petroleum products or hazardous substances has occurred since these investigations.

6.3.6 Drywells/Sumps

No evidence of a dug well/dry well was observed on the exterior of any of the buildings. There are manholes and utility pits at the property as the utilities are located underground.

6.3.7 Pits, Ponds, Lagoons

One pit/cistern is located behind the Litchfield building. This pit/cistern collects runoff from the wetland area to the southwest. The pit is drained by the main storm water drainage pipe for the Subject Property. This drain conveys the water to Deep Brook located to the north of the Subject Property. This main Subject Property storm water drain runs diagonally across the Subject Property from the south to the north.

6.3.8 Wells

Wells that provide potable water to the Subject Property are located at the Pootatuck River to the northeast of the Subject Property. Numerous monitoring wells have been installed at the Subject Property as part of the 2000 HRP environmental site investigation and the RWB&A 2004 environmental site investigation.

6.3.9 Stressed Vegetation

No stressed vegetation was noted at the Subject Property.

6.3.10 Process Wastewater

No process water is generated at the Subject Property. Discharges from the Subject Property include sewage from the occupied buildings, surface water runoff, and groundwater from the footing drains.

6.3.11 Septic system

No septic systems were discovered on the Subject Property.

6.3.12 Oil/Water Separators

No oil/water separators were discovered on the Subject Property.

6.3.13 Surface Water Runoff

Surface water flow at the developed portion of the Subject Property is collected in site catch basins and conveyed through the Subject Property drainage system to Deep Brook. Surface water flow at undeveloped areas is by overland flow to the respective drainage basin, either Deep Brook for the south and west portions of the property or the Pootatuck River for the northeast approximately one-third portion of the Subject Property.

6.3.14 Other Observations

No other observations relevant to the environmental conditions at the property were noted.

6.4 Interior Observations

In April of 1999 environmental personnel from the Maguire Group inspected the interiors of the Subject Property buildings as part of Maguire's Phase I environmental site assessment prepared for the State of Connecticut Department of Public Works. Their findings are given in their report "Transfer Act Site Assessment, Phase I Environmental Site Assessment, Parcel 5 of Fairfield Hills Hospital, 20A Mile Hill Road, Newtown, Connecticut" dated May, 1999. In February of 2000 environmental personnel from HRP Associates, Inc. inspected the interior of the Subject Property buildings as part of HRP's Phase II environmental site investigation prepared for the State of Connecticut Department of Public Works. Their findings are given in their report "Phase II Subsurface and Surficial Environmental Investigation at the Fairfield Hills Hospital, Parcel 5, 20A Mile Hill Road, Newtown, Connecticut" dated February 29, 2000. On June 25, 2008 Russell Bartley of R. W. Bartley & Associates, Inc. interviewed knowledgeable personnel and inspected portions of selected building interiors to update building interior environmental information provided in the two previous environmental reports. Some rooms in the buildings and the tunnels

connecting the buildings were inaccessible because the tunnel doors had been welded shut to deter vandals and some rooms had locked doors for which security personnel do not have keys. An attempt was made to inspect significant items such as electrical transformers containing oil that remained in the buildings, the basement of buildings, mechanical rooms, and sumps. The buildings inspected include the Duplexes, the single family homes, Stamford, Shelton, Danbury, Kent, Canaan, Bridgeport, Litchfield, Cochran, the reservoirs, and the Chiller House.

Regarding activities in building interiors that may cause a release of petroleum products or hazardous substances from the building interiors to the environment the information from 1999 and 2000 can be considered relatively current for no significant activities or storage of materials has occurred in the buildings since the earlier assessments. All but one of the buildings that have not been demolished have remained empty and vacant.

Mr. Fred Hurley, the Town of Newtown's Director of Public Works, was asked if any activities have occurred in the buildings since the town's purchase that might have lead to a release of petroleum products or hazardous substances. He stated that no such activities have occurred except perhaps the release of fuel oil from the Canaan building's outside boiler just prior to the purchase by the town. Mr. Hurley has been the town's Director of Public Works over this entire time period and has been involved in the redevelopment of the Subject Property.

Mr. Brian Chesley, a security guard at the Subject Property was also interviewed. Mr. Chesley has been a security guard since November 2003 and has performed daily inspection rounds during his employment. Mr. Chesley was not aware of any activities in the interior of the buildings that might have caused the release of petroleum products or hazardous substances.

RWB&A is the environmental consultant hired by the town to investigate the Subject Property prior to the purchase by the town and to remediate the property after the purchase. Russell Bartley, the project manager for this project is also not aware of any activities in the interior of the buildings they may have caused the release of petroleum products or hazardous substances to the environment.

The environmental information on the building interiors provided below is a summary of the information provided in the previous reports and the information recently obtained.

6.4.1.1 Woodbury Hall

This building was a residence hall with offices in the basement for the facility's maintenance engineer and locksmith. In 1999, small containers of paints and cleaning supplies were stored in the basement. The building is a two-story brick building with a finished basement. Some floor drains are located in the basement. Currently, the basement contained some remnants of the previous occupation and is wet with mold growing on building floors and walls.

6.4.1.2 Canaan House

The Canaan building is a three-story building used to house patients. In the 1990s the Town of Newtown leased space in this building on the first floor for municipal offices. The building has one elevator which is reported to be operated using an electrical motor. Small containers of cleaning and maintenance chemicals have been stored in the basement during operation of the facility. A portion of the basement is a crawl space with piping. Multiple floor drains and several boiler/utility rooms were observed. Most of the floor drains in Canaan House were choked with black "pitch", a tar-like sealant reportedly used to waterproof the outside of the building foundation. The pitch appeared to be migrating into the building through floor and wall cracks in several locations. A room beneath the main entrance contained a condensate pipe discharging directly to a dry well. Water was present in the dry well. The water was clear. The room had numerous one-inch diameter holes drilled into the concrete flooring that were reportedly used for historical pesticide injections.

6.4.1.3 Yale Laboratory

Multiple floor drains were observed in the basement and on the first floor, where the laboratory and autopsy rooms are located. A pathology materials incinerator is located in the basement. The incinerator operated on fuel oil that was historically contained in a underground storage tank on the west side of the building, as indicated by disconnected copper feed lines protruding from the basement wall. The UST had been removed but had leaked. This release of fuel oil was remediated at the time of the overall remediation of the site by the town in late 2005 and early 2006.

6.4.1.4 Fairfield House

This building was demolished and a baseball field constructed by the Town of Newtown at this location.

6.4.1.5 Litchfield House

The Litchfield building is a two- story building with a finished basement. The building was used to house residents. Multiple floor drains and slop sinks were observed. One sunken pit with a floor drain was observed in room B-22: Additionally, a pipe exit recess in a caged storage room was noted to have an earthen bottom. Three electrical transformers are located in a basement room. The transformers were not leaking (see photographs "Litchfield Building Typical Basement Room", "Litchfield Building Typical Floor Drain", and "Litchfield Building Transformer" located in Appendix B).

6.4.1.6 Bridgewater House

This building has been demolished. A sports building is currently under construction at this location.

6.4.1.7 Newtown Hall

This is a two-story building with an unfinished basement. The building was used for administration. Few floor drains were noted in the basement. A raised concrete pad is present in one corner of the basement. The historical purpose of this pad is unknown. Telephone system backup batteries are located in the basement. The batteries were not leaking.

6.4.1.8 Danbury Hall

The Danbury building is a two-story brick building with a partially-finished basement. The Danbury building was used for housing of staff. Several floor drains and stained flooring were observed in the basement. A piece of electrical equipment with batteries was noted in the basement. Floor drains were present in the basement. See photographs "Danbury Building Battery Backup", "Danbury Building", and "Danbury Building Floor Drain" located in Appendix B.

6.4.1.9 Shelton Hall

Many pedestrian and utility tunnels converge under Shelton Hall. The basement consists of a series of caged rooms/storage areas. Multiple floor drains were noted. Previously it was noted that the concrete floor was cracked and stained with drum rings near a floor drain. One drum contained floor wax. Other drums were empty except for wood and paper trash. The northeast and southeast wings of the basement also contained rectangular metal containers/tanks with no visible openings that appeared to be plumbed directly to the floor. A sump with underground pipes was noted at the west side of the building. The sump contained water which was clear. Previously water has flowed in this sump. Transformers and other electrical equipment were located in utility rooms. None of this equipment was leaking. See photographs "Shelton, Woodbury and Newtown Buildings", "Sheldon Building Basement", "Front of Sheldon Building", "Sheldon Building Sump", "Shelton Building Transformers", "Shelton Building Oil Filled Switch", "Shelton Building Utility Tunnel", and "Shelton Building Battery Backup" located in Appendix B.

6.4.1.10 Plymouth Hall

The Plymouth building is a two-story building with a finished basement. The building was used for recreation and includes an auditorium, gymnasium, cafeteria, and art classrooms. A caged mechanical room (B-8) is located in the basement. Additionally, one sump/dry well was observed next to a potter's wheel and kiln. A second, sealed sump was observed in room B-14 with oil staining around it. Multiple floor drains were observed in the basement of Plymouth Hall. Previously, 25-gallon cans of oil were observed in the elevator mechanical room.

6.4.1.11 Cochran House

The Cochran building is a three-story brick building that was used as a hospital. The basement is unfinished. There are floor drains in the basement and a sump. A kitchen is also located in the basement. There are three elevators in the building. Small containers of cleaning compounds and maintenance chemicals have been stored in the building. A pharmacy was also located in the building. Several possible steam condensate pipes were observed to discharge directly to floor drains in the basement. Multiple floor drains were noted in the kitchen and pharmacy areas. Drum—ring staining was present on the floor of room B-75. A small greenhouse is located to the northeast of the building. See photographs "Cochran Building Hallway" and "Cochran Building Mechanical Room" located in Appendix B.

6.4.1.12 Greenwich House

The Greenwich building is a three-story building with a two-story sunroom at the ends. The building was used as a hospital during the operation of the Fairfield Hills Mental Health Hospital. After the facility ceased operations the building was temporarily used as a drug rehabilitation facility. While being operated as a drug rehabilitation facility the building was heated by a temporary boiler and aboveground oil storage tank located to the north of the building. The building basement is unfinished. The basement contains electrical and mechanical equipment including transformers located in an electrical room. Currently the fuel oil storage tank has been removed and the boiler abandoned in place. See photographs "Temporary Boiler outside Greenwich Building" and "Sampling of Transformers at Greenwich House" located in Appendix B.

6.4.1.13 Kent House

The Kent building is a three-story building. Portions of the basement are full basement and portions are half basement with dirt floors and a piping. There is an elevator located in the building. The building was used to house residents and for administration. There are mechanical rooms located in the basement along with electrical equipment containing batteries. There are transformers located in a room labeled "High Voltage". The transformers were not leaking. The building contains a compressor room with a sump and floor drain. Previously one 55-gallon drum was observed in an earthen-floored crawl space. The drum contained debris including paper, domestic trash, and construction materials. The northern arm of the building contained a large room with raised earthen trenches along the southwest side. The purpose of these trenches could not be determined. See photographs "Kent Building Battery Backup" and "Kent building Transformers" located in Appendix B.

6.4.1.14 Stamford Hall

The Stamford building is a two-story building with a partially finished basement. The basement contains floor drains and mechanical and electrical equipment. There are three transformers and an electrical room marked "High Voltage". These transformers and one oil-filled switch had leaked some oil. There were no floor drains in the electrical room. The transformers had stickers

on them that indicated that they had been sampled by Fuss and O'Neill as part of the PCB transformer survey performed for the Connecticut Department of Public Works in the early 1990s. Six floor drains and two slop sinks were observed in the basement. The building was used as resident housing. See photographs "Stamford Building Basement", "Stanford Building Oil Filled Switch", "Stanford Building Transformers", and "Stanford Building Battery Backup" located in Appendix B.

6.4.1.15 Stratford Hall

The Stratford building is a one story building. The basement is unfinished. A former kitchen is located in the building. The building was used as a library and for employee dining. Three floor drains and one slop sink were observed in the basement of the Stratford building.

6.4.1.16 Norwalk Hall

The Norwalk building is a three-story building. The building was used to house employees. One third of the basement is finished. Four floor drains are located in the basement.

6.4.1.17 Bridgeport House

The Bridgeport building contained the primary facility kitchen and was used for resident dining. The building is a one-story building. Many tunnels converge in the basement of Bridgeport House and there are crawl spaces under the wings; therefore, only a few rooms are present in the basement. The building contained a variety of kitchen equipment including freezers. A mechanical/maintenance room was located on the west side of the building that contained a workbench; concrete slabs for former heavy equipment; a storage cabinet with paints, varnishes and spray adhesives/lubricants/cleaners; five floor drains; and one slop sink piped to a floor drain. Previously, staining was noted below a compressor in the basement. Currently, some of the building interior has been gutted and portions have been demolished in preparation of renovation of the building. Also, piping has been removed from the basement. Presently there is standing water in the basement. See photographs "Partially Renovated Bridgeport Building" and "Water in the Basement of the Bridgeport Building" located in Appendix B.

6.4.1.18 Greenhouse

Half of the greenhouse has been demolished and in the interior of the other half the growing beds were removed. During the remediation performed by the town in 2005/2006 pesticide-contaminated soil was removed from the interior of the greenhouse.

6.4.1.19 Staff Housing – Duplexes: Buildings #58, 59, 60, 61, and 63

The duplexes were used as housing for staff doctors. Five duplex buildings are located on the Subject Property, all of which had full basements. Most basements contained two floor drains and two slop sinks (one for each half of the duplex) which appeared to be plumbed to the sewer

system. It appears that the duplexes were originally heated by steam from the central heating plant. It appears prior to abandonment oil heating was installed in unit 58L, 61L and 61R. The vent and fill pipes for the basement oil tanks typically protrude from grated window wells adjacent to the building foundations. The oil tanks have either been emptied or removed. There was some oil staining in duplex number 61L. Previously, minor oil staining has been noted in the garages.

6.4.1.20 Staff Housing - Brick House with Detached Garage

This building has been renovated and now houses offices for the town's Subject Property administration. The building is heated by propane.

6.4.1.21 Staff Housing – Single Family: Buildings #50, 51, 52, 53, 50, 55, 56, 57

Eight single-family residences are present near the Norwalk building. All of the residences, with the exception of Buildings #50 and #51, were observed to have partial or full basements containing oil burning furnaces and 275-gallon fuel oil tanks. Buildings #50 and #51 are heated with oil from a underground tank located between the two buildings. The copper lines from the basement oil tanks to the furnaces appear to be located beneath the slabs in most of the buildings. However, no cracks or staining were observed that would indicate these feed lines may have leaked. All of the basement tanks have been emptied of their fuel.

Most of the basements also contained one floor drain in front of the furnace and chimney cleanouts located behind the furnace. White residue/salt staining and rust stains were observed to be common around the floor drains. The stains appear to be caused by water and possibly ash from the chimney clean-outs. Building #54 was observed to have a small transformer room attached to the rear of its single-car garage. The room was locked; however, three barrel-type transformers were observed through the window. The transformers are in good condition and were not leaking.

6.4.2 Former Laundry Building

The former Laundry building is a one-story building with a partial unfinished basement. The building is currently used for dry storage by the Town of Newtown and for use by the town fire department and maintenance departments for parking of equipment and training.

The building is heated with natural gas. Transformers are located in a basement transformer vault. Mechanical equipment related to the former use as a laundry building is located in the basement. Floor drains are present in the basement.

A small dry-cleaning operation had formerly been located on the main floor at the northeast corner of the building. Investigations for releases of dry cleaning solvents have been performed

by R. W. Bartley and Associates, Inc. for the Town of Newtown prior to their purchase of the property. The investigations indicated that minor, but significant, Tetrachloroethylene (PCE) contamination of soil and groundwater had occurred in a limited area at the northeast corner of the former Laundry building. The state-approved remedy was to excavate or treat the contamination in place if it could not be excavated due to the possible effect of excavation on the structural integrity of the building, and then to allow the contaminated groundwater to naturally cleanse itself or to treat the groundwater if natural processes would not lower the concentrations of contaminates below the applicable State of Connecticut Remediation Standard Regulations in a reasonable period of time.

As part of the 2005/2006 remediation of the Subject Property all soil with concentrations of PCE greater than the applicable State of Connecticut Remediation Standard Regulations criteria were removed by excavation. It is the intention of the Town of Newtown to monitor the groundwater and allow the groundwater to clean itself which is known as natural attenuation remediation. Now that the source of contamination has been removed the concentrations of PCE in the groundwater should be reduced through biological breakdown and dilution.

7.0 INTERVIEWS

7.1 Interview with Owner

The owner of the Subject Property is the Town of Newtown. The town bought the Subject Property from the State of Connecticut in 2004. The Town of Newtown Director of Public Works, Mr. Fred Hurley, is the town official most familiar with the operations at the property. Mr. Hurley was interviewed concerning the activities since the town purchased the property. Mr. Hurley stated that the town has been planning both public and private development of the property, has performed some construction, and has carried out environmental remediation. The activities that have taken place are: environmental remediation of the site soils, demolition of the Fairfield building and construction of a baseball field, demolition of the Bridgewater building and ongoing construction of an athletic building, the removal of equipment from the Chiller building and the beginning of renovation of the building for use by the Town's Director of Emergency Management for equipment storage and office space, the renovation of the engineer's cottage for use as Subject Property administrative offices, and construction of a new electrical substation for new electrical service. He was not aware of any activities or instances that would have caused a release of petroleum products or hazardous substances to the environment at the Subject Property since their purchase.

7.2 Interview with Site Manager

The Subject Property is managed by the DeMarco Management Corporation. Ms. Maria DeMarco was interviewed and she stated that she was not aware of any activities or incidents that might have caused a release of hazardous substances or petroleum products during the period of town ownership.

7.3 Interview with Occupants

There have been no occupants of the Subject Property since the purchase by the town other than the management firm's occupation of offices at the former engineer's cottage.

7.4 Interview with Local Government Officials

The town's Director of Public Health, Ms. Donna Culbert, was interviewed and she stated that she was not aware of any activities or instances that may have caused a release of hazardous substances or petroleum products during the period of town ownership.

7.5 Interviews with Others

The town historian, Mr. Dan Cruson was interviewed concerning the use of the Subject Property and adjacent properties prior to the purchase and development of the site by the state. He stated that the Subject Property and adjoining properties were all farmland.

8.0 FINDINGS

The purpose of the Findings Section of the ASTM Environmental Site Assessment Standard Practice suggested report format is to identify environmental conditions at the Subject Property that may cause ASTM Environmental Site Assessment Standard Practice "recognized environmental conditions" at the Subject Property. ASTM recognized environmental conditions mean "the presence or likely presence of any hazardous substances or petroleum products on a property under conditions that indicate an existing release, a past release, or a material threat of a release of any hazardous substances or petroleum products into structures on the property or into the ground, ground water, or surface water of the property. The term is not intended to include de minimis conditions that generally do not present a material risk of harm to public health or the environment or that generally would not be the subject of an enforcement action if brought to the attention of appropriate governmental agencies".

The environmental conditions identified in this section will be discussed in the Opinion Section, Section 9.0, below. Any ASTM Environmental Assessment Standard Practice 1527-05 recognized environmental conditions are identified in Section 10.0, Conclusions.

The following environmental conditions at or in the vicinity of the Subject Property were identified that may have an impact the Subject Property:

- 1. The presence of petroleum impacted groundwater at the northeast side of the Yale building.
- 2. The presence of petroleum impacted groundwater at the northeast side of the Canaan building.
- 3. The presence of the dry cleaning solvent tetrachloroethylene impacted groundwater at the northeast side of the former Laundry building.
- 4. The presence of the pesticide dieldrin impacted groundwater at the center developed portion of the Subject Property.
- 5. The presence of flaking lead-based paint on the exteriors of the buildings that may recontaminate soils with lead at the building foundations.
- 6. The presence of dieldrin in the Subject Property groundwater that discharges to Deep Brook.
- 7. The presence of a former incinerator and ash land fill adjacent to the Subject Property to the northeast.
- 8. The presence of actual and potential petroleum contamination at the former Fairfield Hills Mental Health Hospital support buildings located to the north of the Subject Property.
- 9. The presence of petroleum contaminated soil and groundwater contamination at the Reed Intermediate School located adjacent to and to the north of the Subject Property.

9.0 ENVIRONMENTAL CONDITIONS DISCUSSION AND OPINION

The discovered environmental conditions at the Subject Property and in the vicinity of the Subject Property are discussed below. In addition, based upon the known information it is determined if each environmental condition should be considered a "recognized environmental condition" as defined in the American Society of Testing and Materials "Standard Practice for Environmental Site Assessments: Phase I Environmental Site Assessment Process", Standard Practice Designation E 1527-05.

9.1.1 The Presence of Petroleum Impacted Groundwater at the Northeast Side of the Yale building

Contaminated soil and free petroleum product above the shallow groundwater was present in the immediate vicinity of the northeast corner of the building. Sampling of groundwater in the down gradient groundwater flow direction did not detect groundwater contamination. This is likely due to the tight till soil at this location.

As part of the 2005/2006 state-approved and CT DEP-supervised remediation under the Connecticut Property Transfer Act the contaminated soil and free petroleum product was removed by excavation. It is expected that groundwater is now in compliance with the Connecticut Remediation Standard Regulations cleanup criteria. However, this has yet to be confirmed by groundwater sampling in conformance with the Connecticut Remediation Standard Regulations. Monitoring of the groundwater is scheduled to start soon.

The presence of petroleum product in the soil and groundwater at the Subject Property will be considered a recognized environmental condition until cleanup is confirmed by groundwater sampling in conformance with the Connecticut Remediation Standard Regulations.

9.1.2 The Presence of Petroleum Impacted Groundwater at the Northeast Side of the Canaan Building

Contaminated soil and free petroleum product above the shallow groundwater was present in the immediate vicinity of the northeast corner of the building from the December 2003 release of heating fuel. The heating fuel was release from a broken feed pipe from the temporary heating oil storage tank associated with the temporary boiler that supplied heat to the building after the central power plant ceased operation.

At the time of the release, the Subject Property was still owned by the State of Connecticut; therefore, the responsibility for remediation of the release was the State of Connecticut Department of Public Works. Remediation carried out by the State of Connecticut Department of Public Works under the supervision of the CT DEP consisted of excavation of contaminated soil

and the installation of a groundwater treatment system. A small amount of petroleum contaminated soil was left beneath the foundation because it could not be excavated without putting the structural integrity of the building in jeopardy (see photographs titled "Remediation of Canaan Building Oil Spill" and "Oil Spill Remediation – Excavated northeast corner of Canaan House" contained in Appendix B).

Groundwater treatment by removal of contaminated groundwater, treatment of groundwater, and discharge of the treated water to the sewer system is ongoing. The treatment of groundwater will be enhanced by the injection of oxygen-releasing compounds in the near future.

This release of petroleum product to the soil and groundwater at the Subject Property will be considered a recognized environmental condition until groundwater sampling in conformance with the Connecticut Remediation Standard Regulations shows that the groundwater at all areas is below applicable Remediation Standard Regulations criteria.

9.1.3 The Presence of the Dry Cleaning Solvent Tetrachloroethylene Impacted Groundwater at the Northeast Side of the Former Laundry Building

Tetrachloroethylene contaminated soil and groundwater was present in the immediate vicinity of the northeast corner of the former Laundry building. Sampling of groundwater in the down gradient groundwater flow direction did not detect groundwater contamination at a significant distance from the source of contamination. This is likely due to the tight till soil at this location.

As part of the 2005/2006 state-approved and CT DEP-supervised remediation under the Connecticut Property Transfer Act, the contaminated soil was removed by excavation. It is expected that groundwater contamination will naturally be reduced over time by biological and chemical breakdown of the chemical and by dilution. Groundwater monitoring in conformance with the State of Connecticut Remediation Standard Regulations will begin soon. It is expected that concentrations have been reduced and may be in now be in compliance with the Connecticut Remediation Standard Regulations cleanup criteria.

This release of tetrachloroethylene to the soil and groundwater at the Subject Property will be considered a recognized environmental condition until groundwater sampling in conformance with the Connecticut Remediation Standard Regulations confirms that the groundwater at all areas is below applicable Remediation Standard Regulations criteria.

9.1.4 The Presence of the Pesticide Dieldrin Impacted Groundwater at the Center Developed Portion of the Subject Property

The pesticide dieldrin contaminated soil was present at building foundations. Dieldrin contaminated groundwater was present in the center portion of the developed portion of the Subject Property.

As part of the 2005/2006 state-approved and CT DEP-supervised remediation under the Connecticut Property Transfer Act, pesticide contaminated soil at the Subject Property was removed by excavation. It is expected that groundwater contamination will naturally be reduced over time by biological and chemical breakdown of the chemical and by dilution. Groundwater monitoring in conformance with the State of Connecticut Remediation Standard Regulations with begin soon. It is expected that concentrations have been reduced and may be in now be in compliance with the Connecticut Remediation Standard Regulations cleanup criteria.

This release of petroleum product to the soil and groundwater at the Subject Property will be considered a recognized environmental condition until groundwater sampling in conformance with the Connecticut Remediation Standard Regulations confirms that the groundwater at all areas is below applicable Remediation Standard Regulations criteria.

9.1.5 The Presence Flaking of Lead-Based Paint on the Exteriors of the Buildings that may Re-Contaminate Soils around the Buildings

There is flaking lead-based paint on the exteriors of the buildings. The soil around the building foundations may be re-contaminated by lead to concentrations above applicable Remediation Standard Regulations criteria. This release of lead to the soil at the Subject Property will be considered a recognized environmental condition until the flaking is stopped.

9.1.6 The Presence of Dieldrin in the Subject Property Groundwater Discharge to Deep Brook

Groundwater at the Subject Property is collected by footing drains and is discharged to Deep Brook by the Subject Property's drainage system. This discharge contains the pesticide dieldrin at concentrations greater than applicable state surface water protection criteria. This discharge is being monitored monthly by the Town of Newtown. The concentrations are decreasing as a result of the removal of dieldrin-contaminated soil at the Subject Property. It is expected that over time the concentrations will be naturally reduced to the applicable criteria.

As part of the sale agreement between the Town of Newtown and the State of Connecticut it is the responsibility of the State of Connecticut to remediate this situation if removal of the dieldrin-contaminated soil by the town to the State of Connecticut Remediation Standard Regulations criteria does not remediate the discharge to applicable criteria.

This release is not considered a Subject Property recognized environmental condition since remediation of the discharge is the responsibility of the State of Connecticut and the discharge is not to the Subject Property.

9.1.7 The Presence of a Former Incinerator and Ash Landfill Adjacent to the Subject Property to the Northeast

A former Fairfield Hills Mental Health Hospital incinerator and ash landfill is located adjacent to the Subject Property northeast of the Subject Property, and east of the Danbury building. This facility has not been investigated by the state. This facility is not considered a Subject Property recognized environmental condition because the facility is not on the Subject Property, groundwater flow at this location is expected to be to the north/northeast away from the Subject Property and because the State of Connecticut is responsible for environmental conditions at this facility.

9.1.8 The Presence of Actual and Potential Petroleum Contamination at the Former Fairfield Hills Support Buildings Located to the North of the Subject Property

Petroleum contamination of groundwater is being actively remediated at the former Fairfield Hills Mental Health Hospital Garage located to the north and adjacent to the Subject Property. The former Fairfield Hills Mental Health Hospital Garage is owned by the Town of Newtown but the State of Connecticut Department of Public Works owned the property at the time of the release and has taken responsibility for environmental remediation. There also may be contamination at the other former Fairfield Hills Mental Health Hospital maintenance building, storage building, and power plant.

These facility releases and potential releases are not considered Subject Property recognized environmental conditions because the facilities are not on the Subject Property, groundwater flow at these locations are expected to be to the north away from the Subject Property, and because the State of Connecticut is responsible for environmental conditions at these facilities.

9.1.9 The Presence of Petroleum Contaminated Soil and Groundwater Contamination at the Reed Intermediate School Located Adjacent to and to the North of the Subject Property

Petroleum-contaminated soil and groundwater is present beneath the northeast corner of the Reed Intermediate School from the release of heating fuel from a leaking boiler feed line. Contamination of soil and groundwater is confined to beneath the building and along a sewer line. Active remediation is being conducted by the Town of Newtown.

This release is not considered a Subject Property recognized environmental condition since remediation of the release is underway and groundwater from this release area flows to the north away from the Subject Property.

9.2 Additional Considerations

9.2.1 Property Transfer Act

The Subject Property has been considered an "establishment" under the Connecticut Property Transfer Act. Therefore, as part of the purchase of the property by the Town of Newtown the town has to investigate and remediate the Subject Property in accordance with the Connecticut Property Transfer Act and the Connecticut Remediation Standard Regulations [Regulations of Connecticut State Agencies, 22a-134k-1 through 22a-133k-3].

9.2.1.1 State Agreement to Remediate the Discharge to Deep Brook

As stated above, the State of Connecticut has agreed to remediate the dieldrin-contaminated discharge to Deep Brook if concentrations are not reduced to applicable criteria by the town's remediation of the Subject Property contaminated soil to the applicable State of Connecticut Remediation Standard Regulations criteria.

9.2.1.2 Town of Newtown's Purchase of State Covenant-Not-to-Sue

At part of the Subject Property agreement between the Town of Newtown and the State of Connecticut, the town was offered and subsequently purchased a State General Statutes of Connecticut Section 22A-133aa Covenant-not-to-Sue. The purchase cost in accordance with the statute was three percent of the purchase price of the Subject Property. This covenant and statute relieves the town from responsibility for contamination undiscovered at the time of the transfer of ownership of the property.

10.0 CONCLUSIONS

RWB&A has performed a Phase I Environmental Site Assessment in conformance with the scope and limitations of ASTM Practice E 1527-05 of the "Fairfield Hills Campus" property located in Newtown, Connecticut. Any exceptions to, or deletions from, this practice are described in Section 11.0 of this report. This assessment has revealed no evidence of "recognized environmental conditions in connection with the Subject Property except for the following:

- 1. The presence of petroleum impacted groundwater at the northeast side of the Yale building.
- 2. The presence of petroleum impacted groundwater at the northeast side of the Canaan building.
- 3. The presence of the dry cleaning solvent teterachloroethylene impacted groundwater at the northeast side of the former Laundry building.
- 4. The presence of the pesticide dieldrin impacted groundwater at the center developed portion of the Subject Property.
- 5. The presence of flaking lead-based paint on the exteriors of the buildings that may recontaminate soils with lead at the building foundations.

11.0 DEVIATIONS

Significant deviations from the ASTM Environmental Site Assessment Standard Practice are:

No significant deviations occurred other than the limited inspections of the interior of the buildings because: 1) there was no electric service and the basement inspections were carried out with flashlights; and 2) because some rooms were locked and could not be accessed by the security personnel.

12.0 ADDITIONAL SERVICES

No environmental services in addition to the Phase I environmental site assessment were requested. Examples of additional services that could be requested for a typical Phase I environmental assessment are: surveys to determine the presence of asbestos or lead paint associated with Subject Property structures, wetland surveys, testing for electromagnetic fields associated with high voltage power transmission lines, testing for polychlorinated biphenyls (PCBs), radon gas, or other radioactive or infectious materials at the Subject Property or in the environment at the Subject Property.

14.0 SIGNITURE OF ENVIRONMENTAL PROFESSIONALS

This report was prepared by RWB&A on behalf of and for the use and benefit of the Town of Newtown. Its use is expressly controlled by the terms of the contract between RWB&A and the Town of Newtown. No other party shall have any right to use or rely on this document unless RWB&A specifically gives that right in writing.

The scope of this report is limited to the matters expressly covered. The extent of this Phase I Environmental Assessment was defined by the scope of work stated in the agreement between RWB&A and the Town of Newtown and conforms to ASTM Practice E1527-05. In preparing this report, RWB&A has relied on information derived from secondary sources and personal interviews without independently verifying the information.

Russell W. Bartley, P.E., L.E.P.

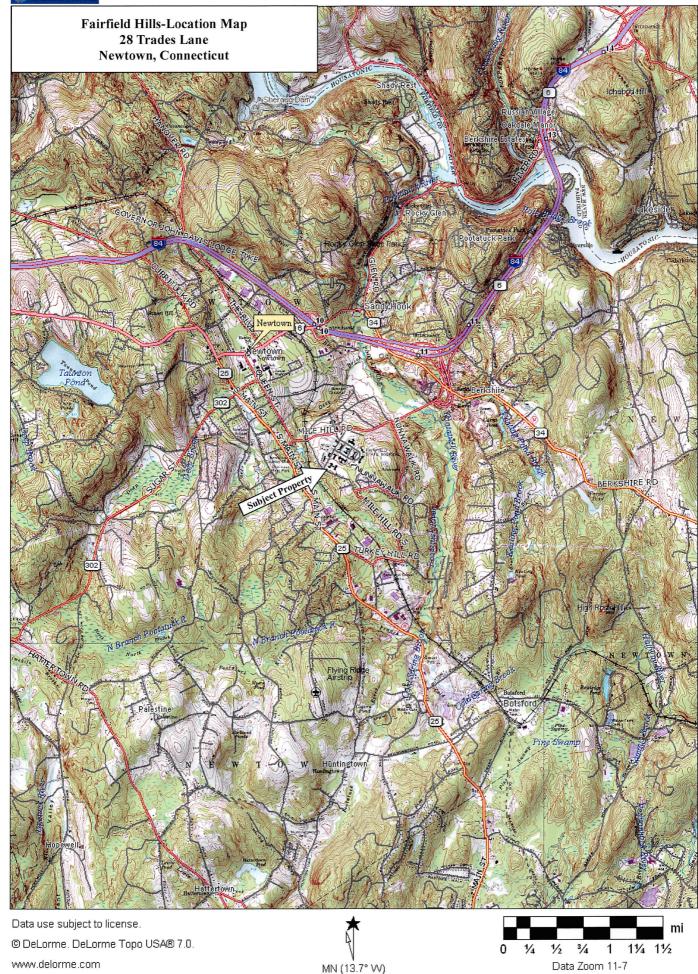

15.0 QUALIFICATIONS OF ENVIRONMENTAL PROFESSIONALS

Mr. Russell W. Bartley, the project manager for this Phase I environmental site assessment, has over 30 years of environmental experience. Mr. Bartley is a State of Connecticut Registered Professional Engineer and a Licensed Environmental Professional, License No. 104. Mr. Bartley has a Bachelor's Degree in Civil Engineering and a Master's Degree in Business Administration.

APPENDIX A - LIMITATIONS

APPENDIX A

SITE ASSESSMENT LIMITATIONS

- 1. The observations described in this report were made under the conditions stated therein. The conclusions presented in the report were based solely upon the services described therein and not on scientific tasks or procedures beyond the scope of described services or the time and budgetary constraints agreed to by The Town of Newtown and RWB&A
- 2. This report was prepared for the exclusive use of The Town of Newtown. No other party is entitled to rely on the conclusions, observations, specifications, or data contained therein without the express written consent of RWB&A This report was prepared pursuant to an Agreement between The Town of Newtown and RWB&A All uses of this report are subject to, and deemed acceptance of, the conditions and restrictions contained therein.
- 3. RWB&A understands that this report is to be used for the purpose described in the introduction of the report. This stated purpose has been a significant factor in determining the scope and level of services provided for in the Agreement. Should the purpose for which the report is to be used, or the proposed use of the Subject Property change, this report is no longer valid and use of this report by The Town of Newtown or others without RWB&A's review and written authorization, shall be at the user's sole risk.
- 4. The passage of time may result in changes in technology, economic conditions, Subject Property variations, or regulatory provisions which would render the report inaccurate.
- 5. In preparing this report, RWB&A has relied on certain information provided by state and local officials and other parties referenced therein, and on information contained in the files of state and/or local agencies available to RWB&A at the time of the site assessment. Although there may have been some degree of overlap in the information provided by these various sources, RWB&A was not authorized and did not attempt to independently verify the accuracy of completeness of information reviewed or received during the course of this Subject Property assessment. RWB&A shall not be liable for any conditions, information, or conclusion, the discovery of which required information not available or independent investigation of information provided to RWB&A unless otherwise indicated. Any site drawing(s) provided within this report is not meant to be an accurate base plan but is used to present the general, relative locations of features on and surrounding the Subject Property.

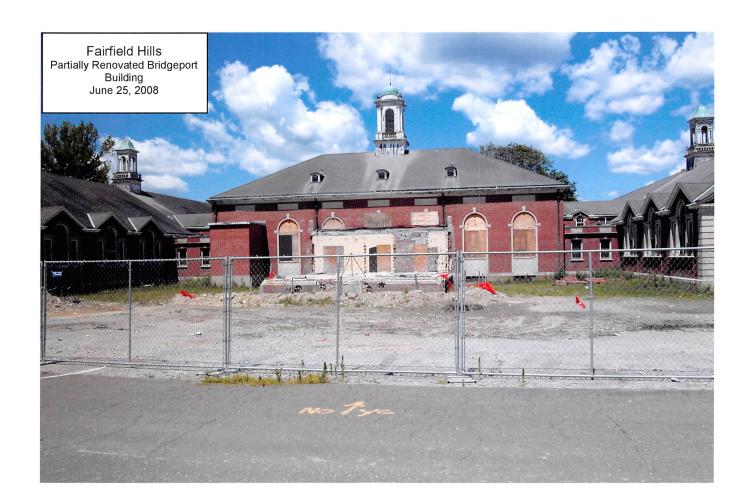

- 6. In the event that The Town of Newtown obtains information on environmental or hazardous waste issues at the Subject Property not contained in this report, such information shall be brought to RWB&A's attention forthwith. RWB&A will evaluate such information and, on the basis of this evaluation, may modify the conclusions stated in this report.
- 7. Observations were made of the Subject Property and of structures on the Subject Property as indicated within the report. Where access to portions of the Subject Property or to structures on the Subject Property was unavailable or limited, RWB&A did not assess the presence of petroleum products or hazardous materials in that portion of the Subject Property or structure.
- 8. Unless otherwise specified in the report, RWB&A did not perform testing or analyses to determine the presence of concentrations of asbestos, electromagnetic fields, lead paint, lead or copper in water, polychlorinated biphenyls (PCBs), radon gas, or other radioactive or infectious materials at the Subject Property or in the environment at the Subject Property.
- 9. The purpose of this report was to assess the potential for the presence in the environment at the Subject Property of hazardous materials or petroleum products in the soil and groundwater. No specific attempt was made to check on the compliance of present or past owners or operators of the Subject Property with Federal, state, or local laws and regulations, environmental or otherwise.
- 10. Except as noted within the text of this report, no quantitative laboratory test was performed as part of the Subject Property assessment. Where an outside laboratory has conducted such analyses, RWB&A has relied upon the data provided and has not conducted an independent evaluation of the reliability of these data.

Disclaimer - Copyright and Trademark Notice

This Report contains certain information obtained from a variety of public and other sources reasonably available to Environmental Data Resources, Inc. It cannot be concluded from this Report that coverage information for the target and surrounding properties does not exist from other sources. NO WARRANTY EXPRESSED OR IMPLIED, IS MADE WHATSOEVER IN CONNECTION WITH THIS REPORT. ENVIRONMENTAL DATA RESOURCES, INC. SPECIFICALLY DISCLAIMS THE MAKING OF ANY SUCH WARRANTIES, INCLUDING WITHOUT LIMITATION, MERCHANTABILITY OR FITNESS FOR A PARTICULAR USE OR PURPOSE. ALL RISK IS ASSUMED BY THE USER. IN NO EVENT SHALL ENVIRONMENTAL DATA RESOURCES, INC. BE LIABLE TO ANYONE, WHETHER ARISING OUT OF ERRORS OR OMISSIONS, NEGLIGENCE, ACCIDENT OR ANY OTHER CAUSE, FOR ANY LOSS OF DAMAGE, INCLUDING, WITHOUT LIMITATION, SPECIAL, INCIDENTAL, CONSEQUENTIAL, OR EXEMPLARY DAMAGES. ANY LIABILITY ON THE PART OF ENVIRONMENTAL DATA RESOURCES, INC. IS STRICTLY LIMITED TO A REFUND OF THE AMOUNT PAID FOR THIS REPORT. Purchaser accepts this Report "AS IS". Any analyses, estimates, ratings, environmental risk levels or risk codes provided in this Report are provided for illustrative purposes only, and are not intended to provide, nor should they be interpreted as providing any facts regarding, or prediction or forecast of, any environmental risk for any property. Only a Phase I Environmental Site Assessment performed by an environmental ron provided information regarding the environmental risk for any property. Additionally, the information provided in this Report is not to be construed as legal advice.

EXECUTIVE SUMMARY

A search of available environmental records was conducted by Environmental Data Resources, Inc (EDR). The report was designed to assist parties seeking to meet the search requirements of EPA's Standards and Practices for All Appropriate Inquiries (40 CFR Part 312), the ASTM Standard Practice for Environmental Site Assessments (E 1527-05) or custom requirements developed for the evaluation of environmental risk associated with a parcel of real estate.

TARGET PROPERTY INFORMATION

ADDRESS

28 TRADES LANE NEWTOWN, CT 06470

COORDINATES

Latitude (North):

41.400120 - 41° 24' 0.4"

Longitude (West):

TARGET PROPERTY SEARCH RESULTS

The target property was not listed in any of the databases searched by EDR.

DATABASES WITH NO MAPPED SITES

No mapped sites were found in EDR's search of available ("reasonably ascertainable ") government records either on the target property or within the search radius around the target property for the following databases:

SURROUNDING SITES: SEARCH RESULTS

Surrounding sites were identified in the following databases.

Elevations have been determined from the USGS Digital Elevation Model and should be evaluated on a relative (not an absolute) basis. Relative elevation information between sites of close proximity should be field verified. Sites with an elevation equal to or higher than the target property have been differentiated below from sites with an elevation lower than the target property.

Page numbers and map identification numbers refer to the EDR Radius Map report where detailed data on individual sites can be reviewed.

Sites listed in **bold italics** are in multiple databases.

Unmappable (orphan) sites are not considered in the foregoing analysis.

FEDERAL RECORDS

CERCLIS: The Comprehensive Environmental Response, Compensation and Liability Information System contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

A review of the CERCLIS list, as provided by EDR, and dated 04/08/2008 has revealed that there are 2 CERCLIS sites within approximately 1 mile of the target property.

Lower Elevation	Address	Dist / Dir	Map ID	Page
NORANDA METAL INDUSTRIES	PROSPECT DRIVE	1/2 - 1 S	G31	93
HARVEY HUBBELL, INC.	PROSPECT DRIVE	1/2 - 1 S	G32	110

CERC-NFRAP: Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

A review of the CERC-NFRAP list, as provided by EDR, and dated 12/03/2007 has revealed that there is 1 CERC-NFRAP site within approximately 1 mile of the target property.

CORRACTS: CORRACTS is a list of handlers with RCRA Corrective Action Activity. This report shows which nationally-defined corrective action core events have occurred for every handler that has had corrective action activity.

A review of the CORRACTS list, as provided by EDR, and dated 03/26/2008 has revealed that there is 1 CORRACTS site within approximately 1.5 miles of the target property.

RCRA-SQG: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Small quantity generators (SQGs) generate between 100 kg and 1,000 kg of hazardous waste per month.

A review of the RCRA-SQG list, as provided by EDR, and dated 03/06/2008 has revealed that there are 2 RCRA-SQG sites within approximately 0.75 miles of the target property.

RCRA-NonGen: RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Non-Generators do not presently generate hazardous waste.

A review of the RCRA-NonGen list, as provided by EDR, and dated 03/06/2008 has revealed that there is 1 RCRA-NonGen site within approximately 0.75 miles of the target property.

STATE AND LOCAL RECORDS

SHWS: The State Hazardous Waste Sites records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. The data come from the Department of Environmental Protection's Inventory of Hazardous Disposal Sites.

A review of the SHWS list, as provided by EDR, and dated 05/30/2008 has revealed that there are 6 SHWS sites within approximately 1.5 miles of the target property.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred.

Any person submitting a Form III shall simultaneously submit a completed Environmental Condition Assessment Form

Hazardous Waste Summary:

Waste code:

Waste name:

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS

CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Spill Report ID: 91-914 According to Spill Report 91-914 dated; 3/15/91, 3x6k USTs were rendered out of service but not cleaned 2 years ago. Tanks were pumped out and are to be removed. One piece of correspondence from OCSRD files receivedon 3/1/89 from Heynen Engineers Inc. of Guilford, CT, is USTs and Soil (1400 yds3) Removal Report. Letter from Heynen documenting removal with analytical on soil. Site is referred to as Parker's Service Station. BTEX concentrations in soil samplesare high. One piece of correspondence from Water Remediation received on 10/15/88 from Heynen Engineers of Guilford CT, states that three gasoline tanks were no longer in use. Each tank contains a

small quantity of gas; no history of gas leaks; GA AREA

Property Transfer Forms: Form III (DEP-PERD-PTP-203) when a discharge, spillage, uncontrolled loss, seepage or filtration of hazardous waste has occurred at the

parcel that has not been fully remediated or the environmental conditions at the parcel are unknown. The person signing the Form III certification agrees to investigate and remediate the site in accordance with the remediation standards. The statute does not require completion of remediation before the parcel is transferred. Any person submitting a Form III shall simultaneously submit a

completed Environmental Condition Assessment Form

(ECAF)(DEP-PERD-PTP-200).

Other Pertinent Environmental Activity Identified at Site

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

NORANDA METAL INDUSTRIES (Continued)

1000152002

Waste name:

IGNITABLE HAZARDOUS WASTES ARE THOSE WASTES WHICH HAVE A FLASHPOINT OF LESS THAN 140 DEGREES FAHRENHEIT AS DETERMINED BY A PENSKY-MARTENS CLOSED CUP FLASH POINT TESTER. ANOTHER METHOD OF DETERMINING THE FLASH POINT OF A WASTE IS TO REVIEW THE MATERIAL SAFETY DATA SHEET. WHICH CAN BE OBTAINED FROM THE MANUFACTURER OR DISTRIBUTOR OF THE MATERIAL. LACQUER THINNER IS AN EXAMPLE OF A COMMONLY USED SOLVENT

WHICH WOULD BE CONSIDERED AS IGNITABLE HAZARDOUS WASTE.

Waste code:

D002

Waste name:

A WASTE WHICH HAS A PH OF LESS THAN 2 OR GREATER THAN 12.5 IS CONSIDERED TO BE A CORROSIVE HAZARDOUS WASTE. SODIUM HYDROXIDE, A CAUSTIC SOLUTION WITH A HIGH PH, IS OFTEN USED BY INDUSTRIES TO CLEAN OR DEGREASE PARTS. HYDROCHLORIC ACID, A SOLUTION WITH A LOW PH, IS USED BY MANY INDUSTRIES TO CLEAN METAL PARTS PRIOR TO PAINTING. WHEN THESE CAUSTIC OR ACID SOLUTIONS BECOME CONTAMINATED AND MUST BE

DISPOSED, THE WASTE WOULD BE A CORROSIVE HAZARDOUS WASTE.

Waste code:

F001

Waste name:

THE FOLLOWING SPENT HALOGENATED SOLVENTS USED IN DEGREASING: TETRACHLOROETHYLENE, TRICHLOROETHYLENE, METHYLENE CHLORIDE, 1,1,1-TRICHLOROETHANE, CARBON TETRACHLORIDE, AND CHLORINATED

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

The NEI (National Emissions Inventory) database contains information on stationary and mobile sources that emit criteria air pollutants and their precursors, as well as hazardous air pollutants (HAPs).

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

CERCLIS (Comprehensive Environmental Response, Compensation, and Liability Information System) is the Superfund database that is used to support management in all phases of the Superfund program. The system contains information on all aspects of hazardous waste sites, including an inventory of sites, planned and actual site activities, and financial information.

ICIS (Integrated Compliance Information System) is the Integrated Compliance Information System and provides a database that, when complete, will contain integrated Enforcement and Compliance information across most of EPA's programs. The vision for ICIS is to replace EPA's independent databases that contain Enforcement data with a single repository for that information. Currently, ICIS contains all

1000432103

Federal Administrative and Judicial enforcement actions. This information is maintained in ICIS by EPA in the Regional offices and its Headquarters. A future release of ICIS will replace the Permit Compliance System (PCS) which supports the NPDES and will integrate that information with Federal actions already in the system. ICIS also has the capability to track other activities occurring in the Region that support Compliance and Enforcement programs. These include; Incident Tracking, Compliance Assistance, and Compliance Monitoring.

Other Pertinent Environmental Activity Identified at Site

AFS (Aerometric Information Retrieval System (AIRS) Facility Subsystem) replaces the former Compliance Data System (CDS), the National Emission Data System (NEDS), and the Storage and Retrieval of Aerometric Data (SAROAD). AIRS is the national repository for information concerning airborne pollution in the United States. AFS is used to track emissions and compliance data from industrial plants. AFS data are utilized by states to prepare State Implementation Plans to comply with regulatory programs and by EPA as an input for the estimation of total national emissions. AFS is undergoing a major redesign to support facility operating permits required under Title V of the Clean Air Act.

TRIS (Toxics Release Inventory System) contains information from facilities on the amounts of over 300 listed toxic chemicals that these facilities release directly to air, water, land, or that are transported off-site.

RCRAInfo is a national information system that supports the Resource Conservation and Recovery Act (RCRA) program through the tracking of events and activities related to facilities that generate, transport, and treat, store, or dispose of hazardous waste. RCRAInfo allows RCRA program staff to track the notification, permit, compliance, and corrective action activities required under RCRA.

Event:

Igration of Contaminated Groundwater under Control, More information

is needed to make a determination.

Event date:

08/11/2000

Event:

Igration of Contaminated Groundwater under Control, Yes, Migration of Contaminated Groundwater Under Control has been verified. Based on a review of information contained in the El determination, it has been determined that migration of contaminated groundwater is under control at the facility. Specifically, this determination indicates that the migration of contaminated groundwater is under control, and that monitoring will be conducted to confirm that contaminated groundwater remains within the existing area of contaminated groundwater. This determination will be re-evaluated when the Agency becomes aware of

significant changes at the facility.

EDR ID Number

EPA ID Number

To maintain currency of the following federal and state databases, EDR contacts the appropriate governmental agency on a monthly or quarterly basis, as required.

Number of Days to Update: Provides confirmation that EDR is reporting records that have been updated within 90 days from the date the government agency made the information available to the public.

FEDERAL RECORDS

NPL: National Priority List

National Priorities List (Superfund). The NPL is a subset of CERCLIS and identifies over 1,200 sites for priority cleanup under the Superfund Program. NPL sites may encompass relatively large areas. As such, EDR provides polygon coverage for over 1,000 NPL site boundaries produced by EPA's Environmental Photographic Interpretation Center (EPIC) and regional EPA offices.

Proposed NPL: Proposed National Priority List Sites

A site that has been proposed for listing on the National Priorities List through the issuance of a proposed rule in the Federal Register. EPA then accepts public comments on the site, responds to the comments, and places on the NPL those sites that continue to meet the requirements for listing.

Date of Government Version: 04/30/2008 Date Data Arrived at EDR: 05/06/2008

DELISTED NPL: National Priority List Deletions

The National Oil and Hazardous Substances Pollution Contingency Plan (NCP) establishes the criteria that the EPA uses to delete sites from the NPL. In accordance with 40 CFR 300.425.(e), sites may be deleted from the NPL where no further response is appropriate.

Date of Government Version: 04/30/2008 Date Data Arrived at EDR: 05/06/2008 Date Made Active in Reports: 06/09/2008

NPL LIENS: Federal Superfund Liens

Federal Superfund Liens. Under the authority granted the USEPA by CERCLA of 1980, the USEPA has the authority to file liens against real property in order to recover remedial action expenditures or when the property owner received notification of potential liability. USEPA compiles a listing of filed notices of Superfund Liens.

Date of Government Version: 10/15/1991 Date Data Arrived at EDR: 02/02/1994 Date Made Active in Reports: 03/30/1994

Number of Days to Update: 56

CERCLIS: Comprehensive Environmental Response, Compensation, and Liability Information System

CERCLIS contains data on potentially hazardous waste sites that have been reported to the USEPA by states, municipalities, private companies and private persons, pursuant to Section 103 of the Comprehensive Environmental Response, Compensation, and Liability Act (CERCLA). CERCLIS contains sites which are either proposed to or on the National Priorities
List (NPL) and sites which are in the screening and assessment phase for possible inclusion on the NPL.

Date of Government Version: 04/08/2008 Date Data Arrived at EDR: 04/25/2008 Date Made Active in Reports: 05/21/2008

Next Scheduled EDR Contact: 09/15/2008 Data Release Frequency: Quarterly

CERCLIS-NFRAP: CERCLIS No Further Remedial Action Planned

Archived sites are sites that have been removed and archived from the inventory of CERCLIS sites. Archived status indicates that, to the best of EPA's knowledge, assessment at a site has been completed and that EPA has determined no further steps will be taken to list this site on the National Priorities List (NPL), unless information indicates this decision was not appropriate or other considerations require a recommendation for listing at a later time. This decision does not necessarily mean that there is no hazard associated with a given site; it only means that, based upon available information, the location is not judged to be a potential NPL site.

LIENS 2: CERCLA Lien Information

A Federal CERCLA ('Superfund') lien can exist by operation of law at any site or property at which EPA has spent Superfund monies. These monies are spent to investigate and address releases and threatened releases of contamination. CERCLIS provides information as to the identity of these sites and properties.

RCRA-TSDF: RCRA - Transporters, Storage and Disposal

RCRAInfo is EPA's comprehensive information system, providing access to data supporting the Resource Conservation and Recovery Act (RCRA) of 1976 and the Hazardous and Solid Waste Amendments (HSWA) of 1984. The database includes selective information on sites which generate, transport, store, treat and/or dispose of hazardous waste as defined by the Resource Conservation and Recovery Act (RCRA). Transporters are individuals or entities that move hazardous waste from the generator offsite to a facility that can recycle, treat, store, or dispose of the waste.

CDL: Clandestine Drug Labs

A listing of clandestine drug lab locations. The U.S. Department of Justice ("the Department") provides this web site as a public service. It contains addresses of some locations where law enforcement agencies reported they found chemicals or other items that indicated the presence of either clandestine drug laboratories or dumpsites. In most cases, the source of the entries is not the Department, and the Department has not verified the entry and does not guarantee its accuracy. Members of the public must verify the accuracy of all entries by, for example, contacting local law enforcement and local health departments.

US BROWNFIELDS: A Listing of Brownfields Sites

Included in the listing are brownfields properties addresses by Cooperative Agreement Recipients and brownfields properties addressed by Targeted Brownfields Assessments. Targeted Brownfields Assessments-EPA's Targeted Brownfields Assessments (TBA) program is designed to help states, tribes, and municipalities—especially those without EPA Brownfields Assessment Demonstration Pilots-minimize the uncertainties of contamination often associated with brownfields. Under the TBA program, EPA provides funding and/or technical assistance for environmental assessments at brownfields sites throughout the country. Targeted Brownfields Assessments supplement and work with other efforts under EPA's Brownfields Initiative to promote cleanup and redevelopment of brownfields. Cooperative Agreement Recipients-States, political subdivisions, territories, and Indian tribes become Brownfields Cleanup Revolving Loan Fund (BCRLF) cooperative agreement recipients when they enter into BCRLF cooperative agreements with the U.S. EPA. EPA selects BCRLF cooperative agreement recipients based on a proposal and application process. BCRLF cooperative agreement recipients must use EPA funds provided through BCRLF cooperative agreement for specified brownfields-related cleanup activities.

UMTRA: Uranium Mill Tailings Sites

Uranium ore was mined by private companies for federal government use in national defense programs. When the mills shut down, large piles of the sand-like material (mill tailings) remain after uranium has been extracted from the ore. Levels of human exposure to radioactive materials from the piles are low; however, in some cases tailings were used as construction materials before the potential health hazards of the tailings were recognized.

HIST FTTS: FIFRA/TSCA Tracking System Administrative Case Listing

A complete administrative case listing from the FIFRA/TSCA Tracking System (FTTS) for all ten EPA regions. The information was obtained from the National Compliance Database (NCDB). NCDB supports the implementation of FIFRA (Federal Insecticide, Fungicide, and Rodenticide Act) and TSCA (Toxic Substances Control Act). Some EPA regions are now closing out records. Because of that, and the fact that some EPA regions are not providing EPA Headquarters with updated records, it was decided to create a HIST FTTS database. It included records that may not be included in the newer FTTS database updates. This database is no longer updated.

SSTS: Section 7 Tracking Systems

Section 7 of the Federal Insecticide, Fungicide and Rodenticide Act, as amended (92 Stat. 829) requires all registered pesticide-producing establishments to submit a report to the Environmental Protection Agency by March 1st each year. Each establishment must report the types and amounts of pesticides, active ingredients and devices being produced, and those having been produced and sold or distributed in the past year.

RAATS: RCRA Administrative Action Tracking System

RCRA Administration Action Tracking System. RAATS contains records based on enforcement actions issued under RCRA pertaining to major violators and includes administrative and civil actions brought by the EPA. For administration actions after September 30, 1995, data entry in the RAATS database was discontinued. EPA will retain a copy of the database for historical records. It was necessary to terminate RAATS because a decrease in agency resources made it impossible to continue to update the information contained in the database.

STATE AND LOCAL RECORDS

SHWS: Inventory of Hazardous Disposal Sites

State Hazardous Waste Sites. State hazardous waste site records are the states' equivalent to CERCLIS. These sites may or may not already be listed on the federal CERCLIS list. Priority sites planned for cleanup using state funds (state equivalent of Superfund) are identified along with sites where cleanup will be paid for by potentially responsible parties. Available information varies by state.

EDR PROPRIETARY RECORDS

Manufactured Gas Plants: EDR Proprietary Manufactured Gas Plants

The EDR Proprietary Manufactured Gas Plant Database includes records of coal gas plants (manufactured gas plants) compiled by EDR's researchers. Manufactured gas sites were used in the United States from the 1800's to 1950's to produce a gas that could be distributed and used as fuel. These plants used whale oil, rosin, coal, or a mixture of coal, oil, and water that also produced a significant amount of waste. Many of the byproducts of the gas production, such as coal tar (oily waste containing volatile and non-volatile chemicals), sludges, oils and other compounds are potentially hazardous to human health and the environment. The byproduct from this process was frequently disposed of directly at the plant site and can remain or spread slowly, serving as a continuous source of soil and groundwater contamination.

OTHER DATABASE(S)

Depending on the geographic area covered by this report, the data provided in these specialty databases may or may not be complete. For example, the existence of wetlands information data in a specific report does not mean that all wetlands in the area covered by the report are included. Moreover, the absence of any reported wetlands information does not necessarily mean that wetlands do not exist in the area covered by the report.

NJ MANIFEST: Manifest Information

Hazardous waste manifest information.

Sensitive Receptors: There are individuals deemed sensitive receptors due to their fragile immune systems and special sensitivity to environmental discharges. These sensitive receptors typically include the elderly, the sick, and children. While the location of all sensitive receptors cannot be determined, EDR indicates those buildings and facilities - schools, daycares, hospitals, medical centers, AHA Hospitals:
